INTRODUCTION

McCarthy Keville O'Sullivan (MKO) was appointed to carry out bird survey works of a proposed wind farm site at Crowinstown Co. Westmeath during the period from June 2019 to March 2020 inclusive. The site is located east of Delvin and west of Athboy in County Westmeath (Grid Ref: N 622 265). The dominant habitat onsite is wet grassland and improved agricultural grassland with accompanying smaller areas of conifer plantation and a quarry. The wider surroundings are predominantly improved agricultural grassland. The total area of the wind farm site is approximately 330ha.

This report describes the ornithological survey methods employed and survey data collected at Crowinstown, Co. Westmeath for the period from May 2019 to March 2020 inclusive. For the month of May 2019 bird surveys were undertaken by Fehily Timoney and Company (FTC). From June 2019 onwards MKO conducted all work including reporting of work carried out by FTC in May 2019. This report also contains information compiled during desktop studies. Particular attention has been paid to species of conservation importance and identified target species.

The report is supported by Technical Appendix 1 which contains the raw data for the bird surveys undertaken from June 2019 to March 2020 inclusive. This includes detail on survey times, weather conditions, surveyors, survey results and other additional information. Flightline figures from surveys are included in Appendix 2.

The report is structured as follows:

- An introduction describing the background and statement of authority regarding ornithological works.
- A description of the desktop study and consultation was carried out with regard to the site.
- A comprehensive description of the ornithological surveys carried out.
- A full description of results for all ornithological surveys carried out.
- **>** Discussion of potential impacts.

The following defines terms used in this report

"Zones of Influence" (ZOI) for potential ornithological receptors refers to the zone within which potential effects are anticipated. ZOIs were assigned following the best available guidance (SNH 2016 and McGuinness et.al 2015).

1.1 Statement of Authority

This report has been prepared by Andrew O'Donoghue (B.Sc.) an Ornithologist with MKO and Project Director, Dervla O'Dowd (B.Sc.). The field surveys carried out from June 2019 to March 2020 were undertaken by Andrew O'Donoghue, Eric Dempsey, Declan Manley and Kristina O'Connor all of whom are competent experts in bird surveying. Field surveys for May 2019 were carried out by an ornithologist with Fehily Timoney and Co.

DESK STUDY & CONSULTATION

2.1 **Desk Study Methods**

A comprehensive desk study was undertaken prior to surveys in summer 2019 to search for any relevant information on species of conservation concern that may potentially make use of the study area. The assessment included a thorough review of the available ornithological data including:

- Review of online web-mappers: National Parks and Wildlife Service (NPWS), National Biodiversity Data Centre (NBDC), Irish Wetland Bird Survey I-WeBS.
- Review of Bird Atlases: (Sharrock, 1976; Lack, 1986; Gibbons et al., 1993; Balmer et al., 2013).
- Review of Birds of Conservation Concern (BoCCI) in Ireland 2014-2019 (Colhoun & Cummins, 2013), with a further review of updated Birds of Conservation Concern (BoCCI) in Ireland 2020-2026 (Gilbert et al., 2021);
- Review of specially requested records from the NPWS Rare and Protected Species Database.

2.2 Desk Study Results

2.2.1 Identification of Designated Sites within the Likely Zone of Influence

Using GIS software, sites designated for nature conservation within the potential ZOI of any proposed wind farm development were identified. The ZOI was derived utilising a precautionary approach. Sites within a 15-kilometre radius of the proposed works were identified.

In addition, and in the absence of any specific Irish guidance, the Scottish Natural Heritage (SNH) Guidance, 'Assessing Connectivity with Special Protection Areas (SPA)' (2016) was consulted. This document guides in relation to the identification of connectivity between proposed development proposals and Special Protection Areas. The guidance takes into consideration the distances some species may travel beyond the boundary of their SPAs and outlines information on dispersal and foraging ranges of bird species which are frequently encountered when considering plans and projects.

Designated sites located within the Likely Zone of Influence are listed below in Table 2-1.

Table 2-1: Special Protection Areas within 15 kilometres of the site

Designated site and code	Distance from wind farm site (km)
River Boyne and River Blackwater SPA (SCI: kingfisher)	1.0
Lough Derravaragh SPA (SCI: whooper swan, pochard, tufted duck, coot)	14.65

2.2.2 **Breeding Bird Atlas Records**

Bird Atlas 2007-11: The breeding and wintering birds of Britain and Ireland' (Balmer et al., 2013) is the most recent comprehensive work on wintering and breeding birds in Ireland.

The study area lies within hectad N66. Table 2-2 below presents a list of species of ornithological interest recorded within the hectad.

Table 2-2 Bird atlas data for relevant hectad (N66)

Species Name	Breeding Status	Conservation Status	
Peregrine (Falco peregrinus)	Possible	BD	
Whooper swan (Cygnus cygnus)	Present	BD	
Black-headed gull (<i>Chroicocephalus ridibundus</i>)	Possible	RL	
Curlew (Numenius arquata)	Present	RL	
Lapwing (Vanellus vanellus)	Present	RL	
Wigeon (Mareca Penelope)	Present	RL	
Meadow pipit (Anthus pratensis)	Probable	RL	
Grey wagtail (Motacilla cinereal)	Possible	RL	
Yellowhammer (Emberiza citronella)	Possible	RL	

 $BD=Birds\ Directive;\ RL=BoCCI\ Red\ List;\ Seen=recorded;\ Breed=breeding;\ Non-B=non-breeding;\ Possible=possible\ breeding;\ Probable=probable\ breeding;\ Confirmed=confirmed\ breeding;\ Present=Present\ during\ winter;\ -=Not\ Recorded$

Table 2-2 above, lists eight species recorded in the relevant hectads during the most recent breeding and winter bird atlas (2007-2011) studies that are also protected under the EU Birds Directive or mentioned on the Birds of Conservation Concern in Ireland (BoCCI) red list (2014-2019).

2.2.3 Method of Identification of Target Species

Following a comprehensive desk study by MKO, initial site visit and consultation, a list of "Target species" likely to occur at the site was compiled. The survey work carried out on the site was specifically designed to survey for these identified target species in accordance with SNH guidance (2017). The target species list was drawn from:

- Annex I of the Birds Directive
- Special Conservation Interests (SCI) of Special Protection Areas (SPA) within the zone of likely significant effects
- Species protected under the fourth schedule of the Wildlife Acts 1976-2012
- Red listed birds of Conservation.

2.3 Consultation

MKO undertook a consultation exercise during the preparation of this report. Table 2-3 below provides a list of the organisations consulted and notes where responses have been received.

Table 2-3 Scoping Response Summary

No.	Consultee	Response to Consultation
1	National Parks & Wildlife Service	Response received 09/04/2020.

2.3.1 NPWS Rare and Protected Species Dataset

An information request was sent to the NPWS in April 2020 requesting records from the Rare and Protected Species Database. The reply from NPWS indicated no records regarding rare and protected bird species from the Hectad in which the study area was contained.

3. METHODS

3.1 Field Survey Methods

This section of the report describes the various field survey methods employed. Field surveys were undertaken from May¹ 2019 – March 2020 inclusive. The data provided in this report is robust and allows clear, precise and definitive conclusions to be made with regard to the likely significant effects on avian receptors identified within the subject site. Field survey methodologies have been devised to survey for the bird species composition and assemblages that occur within the study area.

3.1.1 Initial Site Assessment

Based on the results of the desk study and reconnaissance site visits, the likely importance of the study area for bird species was determined. Based on the collated information available from the above preliminary assessment and adopting a precautionary approach, a site-specific scope for the ornithological surveys was developed.

3.1.2 Vantage Point Surveys

Vantage point (VP) surveys were undertaken in accordance with SNH guidance (SNH, 2017) from two vantage point locations between May 2019 to March 2020. An additional third VP was added for the period October 2019 to March 2020.

Data on bird observations and flight activity was collected from a scanning arc of 180° and a two-kilometre radius by an observer at each fixed location for six hours per month. Surveys were orientated to provide a spread over the full daylight period including at dawn and dusk to coincide with the highest peaks of bird activity.

Details on vantage point watch survey effort are presented in Appendix 1 to this report. This appendix includes full details of dates, times, survey locations, survey duration and weather conditions for each survey. Appendix 2, Figure 1.1 shows the locations of vantage points.

Flight activity was assigned to distinct height bands. The flight bands were chosen with reference to the dimensions of likely turbine models for the site and the resulting potential collision height. Bands are split into 0-10m, 10-25m, 25m-175m and 175m+. In the absence of turbine dimension specifics, 25-175m was considered to be potential collision height (PCH) for the purposes of this report. Potential collision height is the height at which a bird is at risk of colliding with a turbine blade.

3.1.2.1 Viewshed Analysis

Viewshed analysis was carried out to inform coverage of the study area from fixed vantage point locations prior to the commencement of surveys in June 2019 (VP1, VP2) and October 2019 (VP3). Viewsheds were calculated using Resoft Wind Farm ZTV (Zone of Theoretical Visibility) software in combination with Mapinfo Professional (Version 10.0) using a notional and precautionary layer suspended at 25m, which represents the lowest swept height of the turbine blades. While the relevance of being able to view as much of the site to ground level is acknowledged, the SNH guidance emphasises the importance of visibility of the 'collision risk volume' when the data is to be used to estimate the risk of collision with turbines by birds.

¹ May 2019 surveys were undertaken by Fehily Timoney and Co and have been included in Appendix 2. They are not reported in the results section (4) but the key observations have been considered in the discussion in Section 5.

The viewshed analysis involved testing each VP location for its visibility coverage by creating a view shed point two metres in height (to represent the height of observer) on a map using 10 metre contours terrain data. Using the ZTV software, a viewshed of 360 degrees was produced calculating an area 10 metres from ground level up to a two-kilometre radius. The resulting viewshed image was then cropped to 180 degrees to give the viewshed from each VP location in line with SNH (2017). The output of the viewshed analysis confirmed adequate coverage of the proposed turbine layout and to a 500m radius of the viable area. Appendix 2, Figure 1.2 shows the calculated viewshed analysis.

3.1.3 **Breeding Walkover Surveys**

Breeding walkover transect surveys were undertaken to survey for bird species of high conservation concern and identify areas of possible, probable or confirmed breeding territories. Survey methodology followed the adapted Brown and Shepherd survey methods as outlined in Gilbert et al. (1998). The survey area extended 500m from the site boundary as recommended by SNH (SNH, 2017). Certain areas within 500m of the site proved inaccessible, where access to private land was not forthcoming or where dense forestry and vegetation was impractical to walk through. In these incidences, areas could only be surveyed from overlooking areas where public access is permitted i.e. roads, or from within permitted areas.

Transects were selected to survey every area of suitable breeding/ foraging habitat to within 100m, in areas where access was allowed. Target species included waders, raptors, waterbirds, gulls and ground birds of conservation interest. Along with target species, all additional species observed were recorded to inform the evaluation of supporting habitat.

Walkover surveys were carried out between daylight hours during the core breeding season months of May, June and July (Calladine et al. 2009). The duration of each survey visit was four days per month. Following all survey visits the field maps were analysed to determine the number and location of breeding territories. All non-breeding individuals and species encountered were also recorded.

Survey effort, including details of survey duration and weather condition, is presented in Appendix 1. Figure 1.4 in Appendix 2 shows the survey area.

3.1.4 **Breeding Raptor Surveys**

Breeding raptor surveys (*i.e.* birds of prey and owls) were undertaken within the study area and its immediate surroundings. These surveys aimed to identify occupied territories and ascertain whether breeding was successful. The methodology followed Hardey *et al.* (2013). Raptor surveys were undertaken onsite and to a 2km radius from the planning/ development boundary monthly during the core breeding season period (May to July 2019).

Survey effort details are provided in Appendix 1. Figure 1.3 in Appendix 2 shows the study area extending 2km from the development boundary.

3.1.5 **Breeding Woodcock Surveys**

Breeding season surveys for this species were undertaken in accordance with Gilbert et.al (1998). The survey area extended 500m beyond the site boundary. All surveys were undertaken in areas of suitable breeding habitat during June 2019. Surveys commenced one hour before sunset and continue for an hour after sunset/ until it was too dark to see. The survey aimed to record the presence of roding (displaying) male woodcock and thereby establish the distribution and abundance of the species in the study area. This survey method also allowed the observer to survey for owls, i.e. barn owls and long-eared owls. The survey effort undertaken for transect surveys is presented in Appendix 1, including details of survey duration and weather conditions. Figure 1.5 in Appendix 2 shows the transect route locations.

3.1.6 Winter Walkover Surveys

Winter transect surveys were undertaken to determine the presence of bird species of high conservation concern within the study area. The survey area extended 500m beyond the site boundary, where access was allowed.

Transect routes were devised to ensure a representative sample of different habitat were surveyed within the study area. The methodology was based on methods described in Bibby et al. (2000). Target species were raptors, waterbirds, gulls and ground birds of conservation concern. Along with target species, all additional species observed were recorded to inform the evaluation of supporting habitat.

Walkover surveys were carried out during the months of October, December, January and March for the 2019/2020 winter period. The survey effort undertaken for transect surveys is presented in Appendix 1, including details of survey duration and weather conditions. Figure 1.6 in Appendix 2 shows the transect route locations and technical data is provided in Appendix 1.

3.1.7 Wildfowl Distribution and Abundance Surveys

Wildfowl distribution and abundance surveys were focused on the immediate surroundings of the wind farm site. In compliance with SNH (2017) these surveys extend to a 500m radius of the wind farm site for foraging wildfowl and one kilometre of the site for roosting wildfowl. The surveys aimed to provide contextual information on the distribution and abundance of wildfowl in the surrounding hinterland. Count methodology was in line with survey methodology guidelines issued by SNH (2017) and BirdWatch Ireland (2015). Counts were conducted during daylight hours (after dawn or before dusk) from suitable vantage points at the wetland sites. The Survey effort is presented in Appendix 1. Figure 1.7 in Appendix 2 shows the survey area.

3.1.8 Survey Justification

A comprehensive suite of bird surveys was undertaken at the site between May 2019 and March 2020, as detailed in this report.

Results from the 2019/2020 season are derived from a continuous eleven months of surveying undertaken in accordance with SNH Guidance. It is noted that many bird species establish territories from April onward and surveys at the proposed development did not begin until May 2019. This is considered only a minor limitation in the survey scope given territories established in April that persisted until May will have been identified.

The surveys undertaken provide the information necessary to allow a complete, comprehensive and robust assessment of the potential impacts of proposed developments on avian receptors.

4 FIELD SURVEY RESULTS

4.1 Introduction

A comprehensive list of all bird species recorded within the study area is provided in Appendix 1, Table 1. This list also provides the conservation status of each species. Appendix 1, Table 2 provides a comprehensive list of all non-target species recorded within the study area.

The following target species were recorded during the 2019 breeding and 2019/2020 non-breeding seasons. Observations are described in detail in subsequent sections below. The list is ordered in accordance with conservation significance: Annex I species, SCIs of designated sites, Red listed species and raptors:

- > Golden plover (Annex I species)
- Whooper swan (Annex I species; SCI of Lough Derravarragh SPA)
- Hen harrier (Annex I species; Schedule IV of the Wildlife Act; 1976)
- Merlin (Annex I species; Schedule IV of the Wildlife Act; 1976)
- > Peregrine (Annex I species; Schedule IV of the Wildlife Act; 1976)
- Curlew (BoCCI Red Listed)
- Kestrel (BoCCI Red Listed)
- Lapwing (BoCCI Red Listed)
- Snipe (BoCCI Red Listed)
- > Woodcock (BoCCI Red Listed)
- > Buzzard (Raptor, Schedule IV of the Wildlife Act; 1976)
- Sparrowhawk (Raptor, Schedule IV of the Wildlife Act; 1976)

Other species of ornithological interest also recorded during surveys included:

- Jack snipe
- Cormorant
- Herring gull
- > Black-headed gull
- Lesser black-backed gull
- > Common gull
- Wigeon
- > Teal
- Shelduck
- Mallard
- Mute swan
- > Grey heron
- Green sandpiper
- > Little grebe
- Moorhen
- Red-listed passerines (Meadow pipit, Grey wagtail and Yellowhammer)

The following sections describe the observations of each target species under the individual survey headings. Raw data and maps are provided in Appendix 1 and Appendix 2 respectively.

Vantage Point Survey Results

Vantage point surveys were undertaken at the site between June 2019 and March 2020 inclusive. Summary results from vantage point surveys are presented below in Table 4-1 and discussed in further detail in Section 5 of this report.

Table 4-1: Vantage Point Survey Results

Conservation Status	Species	Total number of observations recorded during this survey type	Total Number of flights at PCH	Number of observations on site/within 500m	Activity of note	Figure
Annex 1, BoCCI Red List	Golden plover	17	17	12	Flocks flying over the site, this included some large flocks. Roosting on-site in smaller numbers. Non-breeding season	1-1-1
Annex 1, BoCCI Amber List	Whooper swan	2	2	2	Travelling over the site. Non-breeding season.	1-1-2
Annex 1, BoCCI Amber List	Hen harrier	1	1	1	Ringtail travelling high then foraging over site Non-breeding season.	1-1-3
Annex 1, BoCCI Amber List	Merlin	1	0	1	Adult male flying low on site. Non-breeding season	1-1-4
Annex 1, BoCCI Green List	Peregrine	3	1	3	Juvenile hunting on site. Adult flying over. Non-breeding season	1-1-5
BoCCI Red List	Woodcock	5	0	5	Male seen and heard roding over suitable breeding habitat. Occupied breeding territory. Probable breeding	1-1-6
BoCCI Amber List	Herring gull	2	2	2	Travelling over the site. Non-breeding season.	1-1-7
BoCCI Amber List	Black-headed gull	2	2	2	Travelling over the site. Non-breeding season.	1-1-8
BoCCI Red List	Curlew	2	2	2	Travelling over the site. Non-breeding season.	1-1-9
BoCCI Red List	Lapwing	3	3	3	Travelling over the site. Non-breeding season.	1-1-10
BoCCI Red List	Common snipe	8	1	8	Feeding on and flying over the site. Non-breeding season.	1-1-11

Conservation Status	Species	Total number of observations recorded during this survey type	Total Number of flights at PCH	Number of observations on site/within 500m	Activity of note	Figure
BoCCI Amber List	Cormorant	1	1	1	Travelling over the site. Non-breeding season.	1-1-12

BoCCI Amber List	Lesser black- backed gull	10	9	10	Travelling over the site. Non-breeding season.	1-1-14
BoCCI Red List	Kestrel	17	6	17	Male and three juveniles were observed flying together. Confirmed breeding.	1-1-15
BoCCI Green List	Sparrowhawk	15	7	13	Possible breeding due to presence in suitable habitat during the breeding season.	1-1-16
BoCCI Amber List	Teal	1	1	1	Flock present all winter on site. Non-breeding season.	1-1-17
BoCCI Green List	Mallard	7	5	7	Calling pair in flight and flock of six in suitable breeding habitat. Possible breeding.	1-1-18
BoCCI Green List	Buzzard	72	33	70	Two observations of two birds flying in the breeding season, considered to be a pair. Possible breeding.	1-1-19
BoCCI Green List	Grey heron	14	5	13	Feeding on and travelling over the site. Non-breeding season.	1-1-20
BoCCI Green List	Green sandpiper	1	0	1	Heard from VP. Considered on migration. Non-breeding.	1-1-21
BoCCI Amber List	Little Grebe	1	0	1	One observation of pair present in the breeding season. Probable breeding.	-

Breeding Raptor Survey Results

Breeding raptor surveys were carried out during the 2019 breeding season: June to July. Summary results from breeding raptor surveys are presented in Table 4-2 below and discussed in more detail in Section 5 of this report.

Table 4-2: Breeding Raptor Survey Results

Conservation Status	Species	Total number of observations recorded during survey type	observations on site/within	Activity of note	Breeding Status (Possible, Probable, Confirmed)	Figure
BoCCI Green List	Sparrowhawk	1	1	No activity of note.	Possible breeding	1-3-1
BoCCI Green List	Buzzard	8	4	No activity of note.	Possible breeding due to presence in suitable habitat during the breeding season.	1-3-2

4.1.3 **Breeding Walkover Survey Results**

Breeding walkover surveys were carried out during the 2019 breeding season: June to July. Summary results from breeding walkover surveys are presented below in Table 4-3 and discussed in more detail in Section 5 of this report.

Table 4-3: Breeding Walkover Survey Results

Conservation	Species	Total number of	Number of	Activity of note	Breeding Status (Possible, Probable,	Figure
Status		observations	observations		Confirmed)	
		recorded during	on site/within			
		survey type	500m			
BoCCI Amber	Little grebe	1	1	Pair with young on a small pool.	Confirmed breeding due to presence	1-4-1

4.1.7 **Incidentals**

A number of incidental observations of target species were recorded during the survey period. The most significant of these observations are detailed in Table 4-7 below and discussed in further detail in Section 5 of this report.

Table 4-7 Incidental Observations

Conservation Status	Species	Survey Type	Observations recorded during surveys	Activity of note
BoCCI Amber List	Common gull	Breeding raptor survey	1	Pair flying over. Non-breeding
BoCCI Red List	Common snipe	VP survey	4	Calling unseen near VPs. Non-breeding season.
BoCCI Green List	Mallard	VP survey, Breeding raptor survey	2	Adults on pool near Robinstown little. Possible breeding

4.1.8 Target Species Breeding Status Summary

While breeding status is assigned according to the evidence obtained during individual breeding bird survey types in Tables 4-1 to 4-5 above, Table 4-6 below provides the highest breeding status of target species observed during breeding season surveys (2019) at Crowinstown. Maps showing confirmed breeding territories for each species are provided in Appendix 2 (Figures 2-1, 2-2 and 2-3).

Table 4-8: Target Species Breeding Status Summary

Target Species Breeding Status Summary Target Species Breeding Status Summary					
Species	Overall breeding status				
Golden plover	Non-breeding				
Whooper swan	Non-breeding				
Hen Harrier	Non-breeding				
Merlin	Non-breeding				
Peregrine	Non-breeding				
Golden plover	Non-breeding				
Woodcock	Probable breeding				
Curlew	Non-breeding				
Lapwing	Non-breeding				
Common Snipe	Non-breeding				
Kestrel	Confirmed breeding				
Sparrowhawk	Probable breeding				
Buzzard	Possible breeding				
Other spe	cies of ornithological interest				
Wigeon	Non-breeding				
Shelduck	Non-breeding				
Teal	Non-breeding				
Mallard	Possible breeding				
Jack snipe	Non-breeding				
Cormorant	Non-breeding				
Little grebe	Confirmed breeding				
Mute swan	Non-breeding				
Herring gull	Non-breeding				
Black-headed gull	Non-breeding				
Common gull	Non-breeding				
Lesser black-backed gull	Non-breeding				
Grey heron	Possible breeding				
Green sandpiper	Non-breeding				
Moorhen	Non-breeding				
Meadow pipit	Possible breeding				
Grey wagtail	Possible breeding				
Yellowhammer Possible breeding					

5. DISCUSSION

This section provides a synopsis of the findings of the surveys undertaken during the 2019/2020 season (May 2019 - March 2020) for each of the target species recorded.

5.1 Golden Plover

Golden plover was recorded on 22 occasions throughout the survey period. One observation was during the breeding season, all other observations were outside of the breeding season.

There were a total of 17 observations of golden plover from VP surveys, of these all were at PCH for the duration or part of the observation. On the 12th of August, two birds were recorded travelling over the site at PCH for the duration near Robinstown Little within the site boundary. These are likely non-breeding birds arriving early to wintering grounds. It is noted that breeding birds in Ireland are confined to the north and west of the country.

During the winter months, the largest numbers recorded from VP surveys was on the 19^{th} of December, a flock of 960 birds were recorded c.1km from the site boundary near Ballinlough. The largest flock recorded on site, was of 500 birds on the 23^{rd} of December. This flock was observed west of Carnybrogan for 33 minutes within 500m of the site boundary and spent roughly half of this time at PCH. Most other Golden plover observations from VP surveys were concentrated in two areas; south of Cloneveran and near Ballinlough.

Three observations were recorded during Wildfowl surveys. All of these were on arable land near a dry lough east of Clonmaskill within 500m of the site boundary. The largest flock observed here on the $6^{\rm th}$ of January was of 65 roosting birds. Winter walkover surveys recorded two observations both in the Cavestown and Rosmead area on site. On the $23^{\rm rd}$ of December and the $7^{\rm th}$ of January, 70 birds were flushed from improved grassland.

Much of the site is made up of improved agricultural grassland, that is utilised by this species for foraging. In the winter this species is highly mobile and may not be present in the area for some of the winter/non-breeding period given the lack of observations before the 12th of December or after the 1st of February. Given the number of flights at PCH and their long durations, collision risk will be a key consideration for this species.

5.2 Whooper Swan

Whooper swan were recorded twice during the survey period. On the 1^{st} of February, a flock of four birds were recorded from VP survey travelling over the site within PCH at Rosmead flying southeast. On the 4^{th} of February, a flock of 28 birds was recorded during a VP survey at PCH south of Newtown lough flying northeast.

Both flocks were travelling over the site and were not recorded on any water bodies in the area during other survey types. Because of this and the low overall number of observations, the site is not thought to be of importance to this species.

5.3 **Hen Harrier**

A single hen harrier was recorded on one occasion during VP survey on the 30th of October 2019. A ringtail (female or juvenile bird) was recorded flying high over the site before dropping low and moving west to forage. The flight was below and at PCH for a proportion of the time. The bird was recorded within 500m of the site boundary, just north-east of Cloneveran.

The absence of any further observations or historical records from the area suggests this observation was unusual and that the bird was likely passing through the area.

5.4 **Merlin**

This species was recorded only once during the survey period, outside of the breeding season during VP surveys. On the 30th of October an adult male was seen flying low, below PCH. It flew in a southerly direction north of Cloneveran within 500m of the site boundary.

There were no other observations of this species during the survey period. The lack of further observation suggests the bird was passing through the area, and the site is unlikely to be of importance to this species.

5.5 **Peregrine**

Peregrine was recorded three times throughout the survey period. All three observations were from VP surveys and outside the breeding season. On the 25^{th} of November, a juvenile was recorded hunting north of Robinstown Little on site. It flew at PCH for part of the observation and was later recorded returning south below PCH. On the 18^{th} of February, an adult bird was seen flying west of Carnybrogan below PCH on site and within 500m of the site boundary.

This species was not recorded during any other survey type and is unlikely to have bred within the study area. These observations were likely of birds following prey flocks over the winter period, and the site may be of some importance to this species in this regard.

5.6 **Curlew**

There were two observations of curlew across the survey period. These were both from VP surveys on the 13th of November outside of the breeding season. The first observation was of a loose flock of 19 birds flying west. The flight was below and at PCH for a proportion of time and was recorded just north of Cloneveran. A flock of 14 birds was also noted flying west at PCH just south of Cloneveran.

Both flocks were travelling over the site. The birds may have been foraging in the area given the suitable feeding area around Newtown lough. However, due to the lack of repeat observations from other survey types, it is more likely the birds were passing through the area. If this is the case it is likely the site is of low importance to this species.

5.7 **Lapwing**

Lapwing was recorded on three occasions throughout the survey period. All observations were outside the breeding season and from VP surveys. On the 30th of October, there were two observations, first a flock of 6 birds followed by 28 birds. Both flocks were within 500m of the site boundary flying from Cloneveran towards Newtown lough. The flights included periods at PCH. On the 23rd of December, two birds were recorded flying in the same area at PCH.

The birds may have been foraging in the area given the suitable feeding area around Newtown lough. However, due to the lack of repeat observations from other survey types, it is more likely the birds were passing through the area. If this is the case it is likely the site is of low importance to this species.

5.8 Woodcock

Woodcock was recorded a total of 15 times across the survey period. Five observations were made from VP surveys, all outside of the breeding season. All of these were of one or two birds below PCH. One

bird was also recorded from winter walkover surveys flushed from mixed woodland within 500m of the survey buffer.

Dedicated breeding woodcock surveys were carried out during the 2019 breeding season. Woodcock were observed on nine occasions during these surveys within the site boundary or 500m of same. Of the nine flights recorded there were four observations of roding woodcock. All observations were recorded on site or within 500m of the development boundary. This species is likely to have bred on site due to the presence of roding males in suitable breeding habitat.

5.9 Wigeon

Wigeon was recorded three times during the 2019/2020 survey period, all outside the breeding season. Two observations were of a flock of the same number recorded on Newtown lough on the 6^{th} and 7^{th} of January within 500m of the site boundary. A peak count of 45 birds was recorded roosting on the lough at this time. On the 18^{th} of February, eight Wigeon were recorded roosting again on Newtown lough during wildfowl surveys.

The roosting birds only make use of the lough for part of the winter or were passing through the area as their presence was not recorded consistently throughout the winter.

5.10 Herring Gull

Herring gull was recorded three times during the 2019/2020 survey period. Two observations were from VP surveys on the 1st of February. Two flocks flew across the site at PCH from the Cavestown and Rosmead area. A flock (144 birds) flew south-east followed by another flock of 100 birds flying in a south-westerly direction. A herring gull flock (67 birds) were recorded flying over Newtown lough and the surrounding fields during wildfowl surveys on the 4th of February. All observations involved a mix of juvenile and adult birds

All three observations were outside the breeding season. The initial observations on the 1st of February totalling 244 birds, constitutes a regionally important flock. However, the large numbers were likely attracted to some temporary agricultural activity that was occurring in the wider area. Due to the low number of observations over the entire survey period and the lack of suitable breeding habitat, the site is unlikely to be of importance to the species.

5.11 Black-headed Gull

Black-headed gull were recorded on three occasions during the 2019/2020 survey period. All observations were outside the breeding season. Two of these observations were recorded from VP surveys. On the $12^{\rm th}$ of September and $23^{\rm rd}$ of December lone birds were recorded travelling over the site in the Cavestown and Rosmead area. During the wildfowl survey on the $20^{\rm th}$ of March, a lone adult was recorded over Crowinstown lough c1km from the site boundary. All observations were of birds travelling through the area and given the lack of observations in the breeding season, the site is unlikely to be of importance to this species.

5.12 Kestrel

Kestrel was recorded on 19 occasions over the survey period. Of these 17 were recorded from VP surveys, all of which were within 500m of the site boundary for a proportion of the flight. Six of these were recorded at PCH for all or part of the observation. Three observations were during the breeding season with the rest during non-breeding. On the 25^{th} of July four birds were observed flying for ten minutes together, an adult male and three juveniles north of Ballinlig on site below PCH. This observation

confirms breeding for this species. See Appendix 2 figure 2.2 for the location of confirmed breeding observation.

Two observations were recorded during winter walkover surveys. On the 4th of March, a female and male were observed foraging separately in the same area near Ballinlig within 500m of the site boundary. These two birds are likely the same pair given their proximity to the breeding season observation.

5.13 **Sparrowhawk**

There were 20 observations of Sparrowhawk throughout the survey period. Of these 15 were recorded from VP surveys. Seven of these were at PCH for some or the duration of the observation. All these observations were of individual birds flying over or foraging/hunting. During breeding walkover surveys one male was recorded soaring within 500m of the site boundary. Winter walkover surveys also recorded two observations of individual birds foraging within 500m of the site boundary.

There were two observations during breeding raptor surveys. A female was recorded flying on site on the 26^{th} of June. On the 19^{th} of May, a male was recorded alarm calling briefly south of Cavestown and Rosmead just west of the N52. This observation indicates probable breeding for this species. There is suitable breeding habitat for this species across the site and given the widespread nature and relative frequency of observations, the species is likely breeding in more than one location in the study area.

5.14 **Teal**

Teal was recorded 15 times throughout the survey period. All observations were outside the breeding season. Only one observation was from VP surveys. A flock of 33 birds was recorded flying briefly at PCH near a small lough near Ballinlig within 500m of the site boundary.

During wildfowl surveys, twelve observations were recorded. Small numbers (less than six birds) were observed on loughs across the study area, with a larger flock regularly recorded on the same small lough near Ballinlig. On the 18th of February, a peak count of 50 teal were recorded on this lough, with smaller numbers recorded here consistently from October to March. Winter walkover surveys also recorded this flock with 37 birds present on the 7th of January and 37 birds again on the 4th of March. This lough holds a regionally important (County Importance) number of teal and will require further consideration at the assessment stage.

5.15 Common Snipe

Common snipe was recorded 18 times throughout the survey period, all outside the breeding season. Thirteen observations were from VP surveys, 9 flights and 4 calling unseen birds within 500m of the site boundary. Of the nine flights, only one was briefly at PCH. The largest flock was six birds on the 28^{th} of February near Cavestown and Rosmead below PCH over improved grassland.

From wildfowl surveys, four observations were recorded, with a max. flock size of three birds around Newtown lough on the 18th of February. Winter walkover surveys recorded one observation of a flushed bird within 500m of the site boundary on the 20th of December. Given all observations were outside of the breeding season and the relatively low number of observations on site, the study area is unlikely to be of importance to this species.

5.16 **Jack Snipe**

Jack snipe was recorded twice during the survey period outside of the breeding season. Both observations were during wildfowl surveys on Newtown lough, within 500m of the site boundary. On the 4^{th} and 18^{th} of February, a single individual was recorded. Flushed by the surveyor in the same area on both

occasions. Due to its status as a non-breeding species in Ireland and the low numbers encountered, the site is unlikely to be of importance to this species.

5.17 **Shelduck**

This species was observed once during the 2019/2020 survey period, outside the breeding season. On the 6th of January during wildfowl surveys an individual shelduck male was observed associating with a flock of wigeon on Newtown lough within 500m of the site boundary. There were no further records of this species during any other surveys at the site. Due to the lack of suitable breeding habitat on site or in the surrounding areas, it is unlikely that this species regularly uses the site.

5.18 Lesser Black-backed Gull

Lesser black-backed gull was recorded on 13 occasions throughout the 2019/2020 season. All but two of these were recorded outside the breeding season. Ten observations were made from VP surveys, of these nine were at PCH for part or the entirety of the observation. The largest flock recorded was on the 20^{th} of March when six birds were observed near Cloneveran at PCH for a time, on site and within 500m of the site boundary. There were also three observations of pairs or lone birds from wildfowl surveys.

Due to the lack of breeding observations and the fact most observations recorded were of birds travelling over the site, the site is unlikely to be of importance for this species.

5.19 **Common Gull**

Common gull was recorded three times throughout the 2019/2020 season. From VP surveys two separate juvenile birds were both recorded at PCH near Cloneveran on the 6^{th} of January outside of the breeding season. This was within 500m of the site boundary. One incidental observation was made during the breeding season of two birds on the 19^{th} of May flying near Ballinlough castle c.1km from the site. These birds were considered flying over rather than breeding in the study area due to a lack of suitable habitat. There were no further records of this species and no breeding activity was recorded.

5.20 Cormorant

This species was observed twice during the 2019/2020 season. On the 27th of May, an individual cormorant was observed in flight at PCH on site during the breeding season. Outside the breeding season on the 4th of February a bird was observed feeding on Newtown lough during wildfowl surveys. Due to the lack of suitable breeding habitat on site or in the surrounding areas and the low numbers of observations, it is unlikely that this species uses the site regularly.

5.21 Little Grebe

Little grebe was recorded five times over the survey period. VP surveys recorded one observation on the 25th of July a pair were present on a pool west of Ballinlig within 500m of the site boundary for the duration of the survey. During breeding walkover surveys the same pair were recorded with young on the 29th of June. This observation confirmed this species as breeding. See Appendix 2, Figure 2.3 for confirmed breeding location.

Winter walkover surveys recorded two observations both on the 4^{th} of March and within 500m of the site boundary. A pair were recorded feeding on flooded fields north of Cavestown and Rosmead and another pair were recorded on Newtown lough. One observation was recorded from wildfowl surveys of a pair on Newtown lough on the 6^{th} of January.

5.22 **Buzzard**

Buzzard was recorded 95 times over the survey period. Of these 72 observations were from VP surveys and all but two of these were within 500m of the site boundary. Of these 33 flights were recorded at PCH for all or part of the observation. Most VP survey observations were of one or two birds. The most significant number recorded was on the 20^{th} of March when four birds were recorded soaring together near Newtown on site and within 500m of the site boundary.

Eight observations were recorded during breeding raptor surveys, while four observations were recorded during breeding walkover surveys within 500m of the site boundary. All breeding season observations were of individual birds flying over, foraging or perched, without (breeding) activity of note. There were eleven observations from winter walkover surveys. The highest number of individuals recorded from this survey type was six birds across the study area on the 6^{th} of March.

No breeding behaviour was recorded from any survey type but the continued presence of birds in suitable breeding habitat on site suggest possible breeding for this species, with the possibility of two pairs likely in the study area.

5.23 Mute Swan

This species was recorded on four occasions during the survey period, all outside of the breeding season. Three observations were from wildfowl surveys. The most significant observation being a flock of three adult birds was recorded on the $5^{\rm th}$ of December on the small lough at Carnybrogan within 500m of the site boundary. During winter walkovers surveys a lone bird was recorded on the $4^{\rm th}$ of March feeding in a flooded field north of Cavestown and Rosmead. No breeding activity was recorded during the survey period.

5.24 **Mallard**

Mallard was recorded 19 times over the survey period. There were seven flights recorded from VP surveys with five of these being at PCH for the duration or part of the observation. Three of these observations were during the breeding season. This included the largest flock observed with nine birds recorded on the 29th of July near Ballinlig, within 500m of the site boundary. Breeding walkover surveys made three observations of mallard during the breeding season. Two of these were recorded on the 15th of May within 500m of the site boundary north of Clonarney. Wildfowl surveys recorded mallard on nine occasions on waterbodies in the study area outside the breeding season. The largest flock observed was of seven birds.

Due to the presence of birds in suitable habitat in the breeding season, this species is considered to be a possible breeder.

5.25 Grey Heron

This species was recorded 20 times during the survey period. Of these observations 14 were recorded from VP surveys, four from wildfowl surveys and two from breeding walkover surveys. Eighteen observations were within 500m of the site boundary. Of those recorded from VP, five of these were at PCH for some or all of the observation. All observations were of single birds except on the 18th of February a pair were recorded flying together.

Of these observations, four were within the breeding season and 16 were outside the breeding season. On the 15th of May from VP surveys, a lone bird was observed flying from suitable breeding habitat in mature woodland north of Robinstown Little. The species is regarded as a possible breeder because of this observation.

5.26 **Green Sandpiper**

Green sandpiper was recorded twice during the 2019/2020 season. On the $3^{\rm rd}$ of August, one bird was heard calling during a VP survey near Ballinlig. Another bird was recorded on the $12^{\rm th}$ of September on a small lough in the same location during wildfowl surveys. Both observations were outside the breeding season for this species and considered to be of birds passing through the site while on migration. The low numbers recorded mean the site is unlikely to be of significant importance to this species.

5.27 **Moorhen**

Moorhen was recorded three times over the survey period. All observations were from wildfowl surveys outside of the breeding season. The most significant observation was on the 7th of November, five birds were recorded feeding on a small pond at Ballinlig within 500m of the site boundary. The remaining observations were at Ballinlough, both of two birds. Due to the low numbers and lack of records in the breeding season, the site is likely of low importance to this species.

5.28 Red-listed Passerines

Meadow pipit was recorded 18 times across the survey period. Only one of these observations was within the breeding season when six birds were recorded near Ballinlig on the 28th of June. Grey wagtail was also recorded in the study area with a total of eight observations. One of these was during the breeding season, with a lone bird calling near Cavestown and Rosmead on the 28th of August. Yellowhammer was recorded once during the breeding season c.1km from the site boundary. These species are all red-listed due to a decline in their breeding population in recent years.

6. CONCLUSION

Key impacts resulting from the proposed development for local avian receptors could include habitat loss, disturbance, displacement and collision risk. Collision risk should be a key consideration at the assessment stage for many of the target species noted at Crowinstown. However, until the collision risk analysis is undertaken this impact cannot be considered in any detail. All findings should be considered in the context of two full years of surveys, i.e. two breeding seasons and two non-breeding seasons. Two years of flight activity data is required to inform a robust collision risk analysis.

Golden plover was recorded in the study area in regionally important numbers across the non-breeding/winter period (960 birds peak flock size). Given the frequency of observations at the site and time spent at PCH, collision risk is likely to be a key consideration for this species. The magnitude of this impact will only be understood following the collision risk analysis. This species is red-listed in Ireland and will need to be considered at the assessment stage. Other impacts aside from collision risk could include, habitat loss to the development footprint and disturbance displacement during the construction and operational phase of the proposed development.

Occupied breeding Woodcock territories were recorded in two areas to the north and south of Cavestown and Rosmead. Both areas are dominated by mature broadleaf woodland. The territory to the south is on site and the territory to the north is within 500m of the proposed development boundary. The proposed development could result in the direct or indirect (disturbance/displacement) loss of habitat for this species. This potential impact should be considered in greater detail at the assessment stage.

Wintering wildfowl species of conservation concern including whooper swan, curlew, lapwing, herring gull, black-headed gull and wigeon were all recorded within the study area. Most of these observations were of birds travelling over the study area or roosting on waterbodies. Collision risk assessment, once complete will be the key consideration for these species. For those present on waterbodies (wigeon and teal (Amber listed)), habitat loss from disturbance/displacement will need to be examined at the assessment stage.

Both Hen harrier and Merlin were only recorded on one occasion each. While these species are of high conservation concern (Annex I and Red List), both observations were likely passing through the area due to the lack of observations and the time of year in which they were observed. Given the Hen harrier observation was at PCH for a time, collision risk will need to be considered for this species. Disturbance to both these species, while unlikely to be significant based on the rate of occurrence should be considered in greater detail at the assessment stage.

Kestrel (red-listed (BoCCI)) and sparrowhawk were recorded as confirmed breeding/possibly breeding respectively during breeding season 2019 surveys at Crowinstown. Kestrel were confirmed to have successfully bred locally; with fledglings being recorded within 500m of the proposed development site. A possible sparrowhawk breeding territory was recorded within the proposed development site to the south of Cavestown and Rosmead. The proposed development could result in disturbance that displaces breeding kestrel and sparrowhawk. This potential impact should be considered in greater detail at the assessment stage.

Buzzard was recorded utilising the proposed development area and/or adjacent areas for foraging, commuting and possibly breeding. The proposed development could result in habitat loss and disturbance/displacement impacts on this species. These potential impacts should be considered in greater detail at the assessment stage. Given the frequency of observations at the site, collision risk is likely to be a key consideration for kestrel, sparrowhawk and buzzard, however the magnitude of this impact will only be fully understood following the collision risk analysis.

Table 2 Non-target species li	st
Species	Latin Name
Blackbird	Turdus merula
Blackcap	Sylvia atricapilla
Black-headed Gull	Chroicocephalus ridibundus
Blue Tit	Cyanistes caeruleus
Bullfinch	Pyrrhula pyrrhula
Chaffinch	Fringilla coelebs
Chiffchaff	Phylloscopus collybita
Coal Tit	Periparus ater
Collared Dove	Streptopelia decaocto
Common Gull	Larus canus
Cormorant	Phalacrocorax aristotelis
Dunnock	Prunella modularis
Feral Pigeon	Columba livia f. domestica
Fieldfare	Turdus pilaris
Goldcrest	Regulus regulus
Goldfinch	Carduelis carduelis
Great Tit	Parus major
Green Sandpiper	Tringa ochropus
Greenfinch	Chloris chloris
Grey Heron	Ardea cinerea
Grey Wagtail	Motacilla cinerea
Herring Gull	Larus argentatus
Hooded Crow	Corvus cornix
House Martin	Delichon urbicum
House Sparrow	Passer domesticus
Jack Snipe	Lymnocryptes minimus
Jackdaw	Coloeus monedula
Jay	Garrulus glandarius
Lesser Black-backed Gull	Larus fuscus
Lesser Redpoll	Acanthis flammea
Linnet	Carduelis cannabina
Little Grebe	Tachybaptus ruficollis
Long-tailed Tit	Aegithalos caudatus
Magpie	Pica pica
Mallard	Anas platyrhynchos
Mistle Thrush	Turdus viscivorus
Moorhen	Gallinula chloropus
Mute Swan	Cygnus olor
Pied Wagtail	Motacilla alba yarrellii
Raven	Corvus corax
Reed Bunting	Emberiza schoeniclus
Robin	Erithacus rubecula
Rook	Corvus frugilegus
Sand Martin	Riparia riparia
Shelduck	Tadorna tadorna

Species	Latin Name
Siskin	Carduelis spinus
Skylark	Alauda arvensis
Song Thrush	Turdus philomelos
Starling	Sturnus vulgaris
Swallow	Hirundo rustica
Teal	Anas crecca
Wheatear	Oenanthe oenanthe
Wigeon	Mareca penelope
Willow Warbler	Phylloscopus trochilus
Woodpigeon	Columba palumbus
Wren	Troglodytes troglodytes

Table 3 Survey Effort

Date	Survey Method	VP/ transect/ area number	Survey Duration	Weather Conditions	Comments	Surveyor
25/06/2019	Breeding Raptor Survey	MAP2	06:00 starting at 14:40	Light NE, with overcast conditions		ED
25/06/2019	Breeding Woodcock Survey	1	02:15 starting at 21:35	Light SE, clear		ED
26/06/2019	Vantage Point Survey	VP1	06:00 starting at 14:20	Fresh NE winds, sunny		ED
26/06/2019	Breeding Woodcock Survey	2	02:10 starting at 21:35	Light NE winds, no rain, clear		ED
27/06/2019	Breeding Raptor Survey	MAP1	06:00 starting at 14:50	Light E winds, sunny		ED
27/06/2019	Breeding Woodcock Survey	3	02:15 starting at 21:35	Light E, no rain - clear		ED
28/06/2019	Vantage Point Survey	VP2	06:00 starting at 12:10	Light SE winds, overcast but no rain		ED
29/06/2019	Breeding Walkover	MAP 1-BW	06:00 starting at 11:00	Light SW winds, no rain but overcast and warm		ED
18/07/2019	Breeding Raptor Survey	MAP1	06:00 starting at 12:10	Moderate W winds with showers		ED
19/07/2019	Breeding Raptor Survey	MAP2	06:00 starting at 11:10	Light SW, with sunny spells		ED
24/07/2019	Breeding Walkover	MAP 1-BW	06:00 starting at 11:10	Light S winds, warm with sunny spells		ED
25/07/2019	Vantage Point Survey	VP2	06:00 starting at 10:40	Light SE winds, overcast but no rain		ED
26/07/2019	Vantage Point Survey	VP1	06:00 starting at 11:05	Strong SW winds, with heavy showers clearing in late afternoon		ED
12/08/2019	Vantage Point Survey	VP1	01:00 starting at 15:30	Wind Speed and Direction: Light Breeze, w; Visibility: Good (>2km); Cloud Height: >500m; Cloud Cover %: 66-100% Rain: Light Showers; Frost: None; Snow: None		DM

	GRAPHY	

INTRODUCTION

McCarthy Keville O'Sullivan (MKO) was appointed to carry out bird survey works at Crowinstown in County Westmeath during the period from April 2020 to March 2021 inclusive. The site is located east of Delvin and west of Athboy in County Westmeath (Grid Ref: N 622 265). The dominant habitat onsite is wet grassland and improved agricultural grassland with accompanying smaller areas of conifer plantation and a sand quarry. The wider surroundings are predominantly improved agricultural grassland. The total area of the wind farm site is approximately 330ha.

This report describes the ornithological survey methods employed and survey data collected at Crowinstown for the period from April 2020 to March 2021 inclusive. This report also contains information compiled during desktop studies. Particular attention has been paid to species of conservation importance and identified target species.

The report is supported by Technical Appendix 1 which contains the raw data from the bird surveys undertaken from April 2020 to March 2021. This includes detail on survey times, weather conditions, surveyors, survey results and other additional information. Flight line figures from surveys are included in Appendix 2.

The report is structured as follows:

- An introduction describing the background and statement of authority regarding ornithological works.
- A description of the desktop study and consultation that was carried out with regards to the site.
- A comprehensive description of the ornithological surveys carried out.
- A full description of results for all ornithological surveys carried out.
- A discussion of the potential impacts of the wind farm site.

The following defines terms used in this report

> "Zones of Influence" (ZOI) for potential ornithological receptors refers to the zone within which potential effects are anticipated. ZOIs were assigned following the best available guidance (SNH 2016 and McGuinness et.al 2015).

1.1 Statement of Authority

This report has been prepared by Patrick Manley (B.Sc.) a Project Ornithologist with MKO. The field surveys were undertaken by Athena Michaelides, Andrew O'Donoghue, Declan Manley, Kristina O'Connor, Niall McHugh, Peter Capsey and Paul Troake, all of whom are competent experts in bird surveying.

DESK STUDY & CONSULTATION

2.1 **Desk Study Methods**

A comprehensive desk study was undertaken before surveys in summer 2020 to search for any relevant information on species of conservation concern that may potentially make use of the study area. The assessment included a thorough review of the available ornithological data including:

- Review of online web-mappers: National Parks and Wildlife Service (NPWS), National Biodiversity Data Centre (NBDC), Irish Wetland Bird Survey I-WeBS.
- Review of Bird Atlases: (Sharrock, 1976; Lack, 1986; Gibbons et al., 1993; Balmer et al., 2013).
- Review of Birds of Conservation Concern (BoCCI) in Ireland 2020-2026 (Gilbert et al., 2021)
- Review of specially requested records from the NPWS Rare and Protected Species Database.

Desk Study Results

2.2.1 Identification of Designated Sites within the Likely Zone of Influence

Using GIS software, sites designated for nature conservation within the potential ZOI of the proposed wind farm site were identified. The ZOI was derived utilising a precautionary approach. Sites within a 15-kilometre radius of the proposed works were identified.

In addition, and in the absence of any specific European or Irish guidance, the Scottish Natural Heritage (SNH) Guidance, 'Assessing Connectivity with Special Protection Areas (SPA)' (2016) was consulted. This document provides guidance in relation to the identification of connectivity between proposed development proposals and Special Protection Areas. The guidance takes into consideration the distances some species may travel beyond the boundary of their SPAs and outlines information on dispersal and foraging ranges of bird species which are frequently encountered when considering plans and projects.

Designated sites (SPAs) located within the Likely Zone of Influence are listed below in Table 2-1.

Table 2-1 Special Protection Areas within 15 kilometres of site

Designated site and code	Species of qualifying interests	Distance from wind farm site (km)
River Boyne and River Blackwater SPA	Kingfisher	1.0
Lough Derravaragh SPA (004043)	Whooper Swan Pochard Tufted Duck Coot	14.65

2.2.2 Bird Atlas Records

Bird Atlas 2007-11: The breeding and wintering birds of Britain and Ireland' (Balmer et al., 2013) is the most recent comprehensive work on wintering and breeding birds in Ireland.

The study area lies within hectad N66. Table 2-2 below presents a list of species of ornithological interest recorded within the hectad.

Table 2-2 Breeding bird atlas data for relevant hectad (N66)

Species Name	Breeding Status	Conservation Status
Peregrine	Possible	BD
Kestrel	Possible	RL
Snipe	Probable	RL
Buzzard	Probable	-
Sparrowhawk	Probable	-
Meadow Pipit	Probable	RL
Yellowhammer	Possible	RL

BD=Birds Directive; RL = BoCCI Red List; Seen = recorded; Breed = breeding; Non-B = non-breeding; Possible = possible breeding; Probable = probable breeding; Confirmed = confirmed breeding.

Table 2-2 above, lists seven species recorded in the relevant hectad during the most recent breeding bird atlas (2007-2011) studies that are also protected under the EU Birds Directive or mentioned on the Birds of Conservation Concern in Ireland (BoCCI) red list (2020-2026) or listed on the fourth schedule of the Wildlife Act 1976.

Table 2-4 shows those species recorded in the relevant hectads (C42 and C43) in the wintering birds' atlases that are also protected under the EU Birds Directive or mentioned on the Birds of Conservation Concern in Ireland (BoCCI) red list (2020-2026) or listed on the fourth schedule of the Wildlife Act 1976.

Table 2-3 Winter bird atlas data for relevant hectad (N66)

Species Name	Conservation Status
Kestrel	RL
Snipe	RL
Buzzard	-
Meadow Pipit	RL

BD=Birds Directive: RL = BoCCI Red List.

2.2.3 Method of Identification of Target Species

Following a comprehensive desk study by MKO, initial site visit and consultation, a list of "Target species" likely to occur at the site was compiled. The survey work carried out at the wind farm site was specifically designed to survey for these identified target species in accordance with SNH guidance (2017). The target species list was drawn from:

- > Annex I of the Birds Directive
- > Red listed birds of Conservation
- > Special Conservation Interests (SCI) of Special Protection Areas (SPA) within the zone of likely significant effects
- > Species protected under the fourth schedule of the Wildlife Acts 1976-2012.

2.3 Consultation

MKO undertook a consultation exercise during the preparation of this report. Table 2-4 below provides a list of the organisations consulted and notes where responses have been received.

Table 2-4 Scoping Response Summary

No.	Consultee	Response to Consultation
1	National Parks & Wildlife Service	Response received 31/12/2019 - No bird data held by NPWS for the 5km radius of site boundary.

2.3.1 NPWS Rare and Protected Species Dataset

An information request was sent to the NPWS in August 2019 requesting records from the Rare and Protected Species Database. A response was received on the $31^{\rm st}$ of December 2019 informing MKO that the NPWS holds no bird data for 5km around the provided site boundary.

FIELD SURVEYS

3.1 Field Survey Methods

This section of the report describes the various field survey methods employed. Field surveys were undertaken from April 2020 – March 2021 inclusive. The data provided in this report is robust and allows clear, precise and definitive conclusions to be made with regard to the likely significant effects on avian receptors identified within the subject site. Field survey methodologies have been devised to survey for the bird species composition and assemblages that occur within the study area.

3.1.1 Initial Site Assessment

Based on the results of the desk study and reconnaissance site visits, the likely importance of the study area for bird species was determined. Based on the collated information available from the above preliminary assessment and adopting a precautionary approach, a site-specific scope for the ornithological surveys was developed.

3.1.2 Vantage Point Surveys

Vantage point (VP) surveys were undertaken in accordance with SNH guidance (SNH, 2017) from three vantage point locations from April 2020 to March 2021.

Data on bird observations and flight activity was collected from a scanning arc of 180° and a two-kilometre radius by an observer at each fixed location for six hours per month. Surveys were orientated to provide a spread over the full daylight period including at dawn and dusk to coincide with the highest points of bird activity.

Details on vantage point watch survey effort are presented in Appendix 1 to this report. This appendix includes full details of dates, times, survey locations, survey duration and weather conditions for each survey. Appendix 2, Figure 1 shows the locations of vantage points and technical data is provided in Appendix 1.

Flight activity was assigned to distinct height bands. The flight bands were chosen with reference to the dimensions of likely turbine models for the site and the resulting potential collision height. Bands are split into 0-15m, 15-25m, 25m-200m and 200m+. As the turbine dimensions were not known at the time of writing this report, flights between 25-200m were considered to be at potential collision height (PCH) for the purposes of this report.

3.1.2.1 Viewshed Analysis

Viewshed analysis was carried out to inform coverage of the study area from fixed vantage point locations (VP1, VP2, VP3) prior to the commencement of surveys in April 2020. Viewsheds were calculated using Resoft Wind Farm ZTV (Zone of Theoretical Visibility) software in combination with Mapinfo Professional (Version 10.0) using a notional and precautionary layer suspended at 25m, which represents the lowest swept height of the turbine blades. While the relevance of being able to view as much of the site to ground level is acknowledged, the SNH guidance emphasises the importance of visibility of the 'collision risk volume' when the data is to be used to estimate the risk of collision with turbines by birds.

The viewshed analysis involved testing each VP location for its visibility coverage by creating a view shed point two metres in height (to represent the height of observer) on a map using 10 metre contours terrain data. Using the ZTV software, a viewshed of 360 degrees was produced calculating an area 10 metres from ground level up to a two-kilometre radius. The resulting viewshed image was then cropped to 180 degrees to give the viewshed from each VP location in line with SNH (2017). A 500m buffer was applied

to the likely maximum viable area of the site for a wind energy development in line with SNH's recommendation to conduct surveys to 500m from the outermost turbines of a proposed wind farm site (2017). The viewshed analysis offers maximum views of the study area with adequate coverage of the proposed turbine layout. As described above, the predicted collision risk height band that was used in the current assessment (>25m) is considered to be precautionary and in line with previously recommended height bands advocated in SNH (2005) guidance documents. Appendix 2, Figure 9. shows the calculated viewshed analysis.

3.1.3 **Breeding Walkover Surveys**

Breeding walkover surveys were undertaken to determine the presence of bird species of high conservation concern and identify areas of possible, probable, or confirmed breeding territories for bird species observed within the study area. The survey methodology followed the O'Brien & Smith method for lowland sites as outlined in Gilbert et al. (1998). The study area for these surveys was the wind farm site and a 500m survey radius of the wind farm site.

Transect routes were devised to ensure coverage of different habitat complexes between vantage point locations within the study area. Transects were selected in order to survey all areas of suitable breeding/foraging habitat to within 100m, where access allowed. Target species included waders, raptors, waterbirds, gulls and other birds of conservation concern. Along with target species, all additional species observed were recorded to inform the evaluation of supporting habitat.

Walkover surveys were carried out during daylight hours, during the core breeding season months of May, June and July (2020), with the wind farm site being visited on two days per month on each occasion. Following all survey visits, the field maps were analysed to determine the number and location of breeding territories. All non-breeding individuals and species encountered were also recorded.

Survey effort, including details of survey duration and weather condition, is presented in Appendix 1. Figure 2 in Appendix 2 shows the survey area.

3.1.4 **Breeding Raptor Surveys**

Breeding raptor surveys (*i.e.*, birds of prey and owls) were undertaken within the study area and its immediate surroundings. These surveys aimed to identify occupied territories and ascertain whether breeding was successful. The methodology followed Hardey et al. (2013). Raptor surveys were undertaken onsite and to a 2km radius from the wind farm site on a monthly basis during the core breeding season period (May to July 2020).

Survey effort details are provided in Appendix 1. Figure 3 in Appendix 2 shows the study area extending 2km from the wind farm site.

3.1.5 Winter Walkover Surveys

Winter transect surveys were conducted to determine the presence of bird species of high conservation concern within areas of potentially suitable habitat in the survey area. The study area for these surveys was the wind farm site and a 500m survey radius of the wind farm site.

Transect routes were devised to ensure coverage of different habitat complexes between vantage point locations within the study area, during the winter months. The methodology was based on methods described in Bibby et al. (2000). Target species were raptors, waterbirds, gulls and ground birds of conservation interest. Along with target species, all additional species observed were recorded to inform the evaluation of supporting habitat.

Survey effort details are provided in Appendix 1. Figure 4 in Appendix 2 shows the study area.

3.1.6 Wildfowl Distribution Surveys

Significant wetland sites within 1km of the study area were surveyed for wildfowl populations (i.e. waders, waterfowl, gulls, grebes and rails). The survey area follows the recommended survey radius of 500m for foraging wildfowl and one kilometre for roosting wildfowl surveys as stipulated by SNH (SNH, 2017). These surveys aimed to provide contextual information on the distribution and abundance of waterfowl species within the wider surroundings of the wind farm site. The count methodology was in line with survey methodology guidelines issued by SNH (2017) and BirdWatch Ireland (2015). Counts were undertaken during daylight hours (after dawn and before dusk).

The Survey effort for all wildfowl distribution and abundance surveys is presented in Appendix 1. Figure 5 in Appendix 2 shows the wetland site survey locations.

3.1.7 Woodcock Surveys

Breeding season surveys for this species were undertaken in accordance with Gilbert et.al (1998). The survey area extended 500m beyond the wind farm site. All surveys were undertaken in areas of suitable breeding habitat during May and June 2020. Surveys commenced one hour before sunset and continue for an hour after sunset or until it was too dark to see. The survey aimed to record the presence of roding (displaying) male woodcock and thereby establish the distribution and abundance of the species in the study area. This survey method also allowed the observer to survey for owls, i.e., barn owls and long-eared owls. The survey effort undertaken for transect surveys is presented in Appendix 1, including details of survey duration and weather conditions. Figure 6 in Appendix 2 shows the survey area.

3.1.8 Survey Justification

A comprehensive suite of bird surveys was undertaken at the site between April 2020 and March 2021, as detailed in this report.

Results from the 2020 breeding season and the 2020/21 winter season are derived from a continuous twelve months of surveying undertaken in accordance with SNH Guidance. Surveys were not conducted in April 2020 due to the Covid-19 lockdowns. There is a limitation in the survey effort due to this, given that early breeding activity may have been missed. However, territories that established in April and persisted into may are likely to have been identified.

The surveys undertaken provide the information necessary to allow a complete, comprehensive and robust assessment of the potential impacts of the wind farm site on avian receptors. The survey duration and scope are considered entirely satisfactory.

3.2 Field Survey Results

3.2.1 Introduction

A comprehensive list of all target bird species recorded within the study area is provided in Appendix 1, Table 1. This list also provides the conservation status of each species. Appendix 1, Table 2 provides a comprehensive list of all non-target species recorded within the study area.

The following target species were recorded during the survey period, April 2020 to March 2021 and observations are described in detail in subsequent sections below. The list is ordered in accordance with conservation significance: Annex I species, SCIs of designated sites, Red listed species and raptors:

- Golden Plover (Annex I species)
- Kingfisher (Annex I species; SCI of nearby SPA)
- Merlin (Annex I species; Schedule IV of the Wildlife Act; 1976)
- > Peregrine Falcon (Annex I species; Schedule IV of the Wildlife Act; 1976)
- Whooper Swan (Annex I species; SCI of nearby SPA)
- Wood Sandpiper (Annex I species)
- Curlew (BoCCI Red Listed)
- Kestrel (BoCCI Red Listed)
- Lapwing (BoCCI Red Listed)
- Snipe (BoCCI Red Listed)
- > Woodcock (BoCCI Red Listed)
- Buzzard (Raptor, Schedule IV of the Wildlife Act; 1976)
- Long-eared Owl (Owl, Schedule IV of the Wildlife Act; 1976)
- Sparrowhawk (Raptor, Schedule IV of the Wildlife Act; 1976)
- > Red Listed Passerines (Meadow Pipit, Yellowhammer)

The following sections describe the observations of each target species under the individual survey headings. Raw data and maps are provided in Appendix 1 and Appendix 2, respectively.

3.2.2 Vantage Point Survey Results

Vantage point surveys were undertaken at the site between April 2020 and March 2021 inclusive. Summary results from vantage point surveys are presented below in Table 3-1 and discussed in further detail in Section 4 of this report.

Table 3-1 Vantage Point Survey Results

Conservation Status	Species	Total number of observations	Total Number of flights at PCH	Number of observations on site/within 500m	Activity of note	Figure
Annex I	Golden Plover	26	12	26	Flocks of between 1 and 240 birds were observed. The majority of observations were of birds commuting or circling over improved agricultural grassland. There were four observations of birds landing/foraging on grassland habitats. Observations were concentrated over an area of improved agricultural grassland to the southwest of the wind farm site.	Appendix 2, Figure 1.1
Annex I	Merlin	1	00	1	There was one observation of a bird commuting.	Appendix 2, Figure 1.2
Annex I	Peregrine	5	4	5	There were five observations of individuals commuting, circling, hunting or perched in a tree.	Appendix 2, Figure 1.3
Annex I	Whooper Swan	5	5	5	Observations ranged from two to eleven birds. All observations were of birds commuting over the wind farm site at PCH.	Appendix 2, Figure 1.4
BoCCI Red List (Breeding Only)	Curlew	1	1	1	There was one observation of an individual commuting over the wind farm site at PCH during winter months.	Appendix 2, Figure 1.5
BoCCI Red List	Kestrel	43	28	41	The majority of observations were of individuals hunting or commuting. There was one confirmed and one possible breeding territory identified during the 2020 breeding season. At the north of	Appendix 2, Figure 1.6/1.6.1

Conservation Status	Species	Total number of observations	Total Number of flights at PCH	Number of observations on site/within 500m	Activity of note	Figure
					the wind farm site a kestrel was observed mobbing a buzzard and carrying prey on two dates. To the south of the site, a possible breeding territory was identified when two kestrels were observed mating.	
BoCCI Red List	Lapwing	3	2	2 (one flight not mapped)	Observations ranged from 1 to 40 birds and were all of birds commuting.	Appendix 2, Figure 1.7
BoCCI Red List	Snipe	3	1	3	Flocks ranged from an individual to three birds. All observations were of birds travelling or being flushed.	Appendix 2, Figure 1.8
BoCCI Green List	Buzzard	252	175	233	The majority of flights were of birds commuting, hunting or soaring. There were 13 flights related to breeding activity. There were 12 display flights and one observation of begging chicks. There was a total of three probable territories and one confirmed territory.	Appendix 2, Figure 1.9/1.9.1
BoCCI Green List	Sparrowhawk	39	20	36	The majority of observations were of birds commuting or circling. There were nine observations related to territorial behaviour, including displaying and one observation of a bird carrying prey to a nest site. There was one confirmed and three possible breeding territories.	Appendix 2, Figure 1.10/1.10.1

3.2.3 **Breeding Walkover Survey Results**

Breeding walkover surveys were carried out during the 2020 breeding season: May to July. Summary results from breeding walkover surveys are presented below in Table 3-2 and discussed in more detail in Section 4 of this report.

Table 3-2 Breeding Walkover Survey Results

Conservation Status	Species	Total number of observations recorded	Number of observations on site/ within 500m	Activity of note	Breeding Status	Figure
BoCCI Red List	Kestrel	6	4	The majority of observations were of birds hunting or travelling. There was one observation of a bird carrying prey, confirming breeding nearby.	Confirmed (One Territory)	Appendix 2, Figure 2.1/2.1.1
BoCCI Red List	Lapwing	1	1	One observation of an adult with a fledged chick feeding at a small pond, confirming breeding locally.	Confirmed (One Territory)	Appendix 2, Figure 2.2/2.2.1
BoCCI Red List	Snipe	1	1	One observation of a bird drumming, indicating a probable breeding territory	Probable (One Territory)	Appendix 2, Figure 2.3/2.3.1
BoCCI Green List	Buzzard	35	33	All observations were of birds commuting or circling. No breeding evidence was observed	-	Appendix 2, Figure 2.4
BoCCI Amber List	Sparrowhawk	2	2	Two observations of birds travelling	-	Appendix 2, Figure 2.5

3.2.4 **Breeding Raptor Survey Results**

Breeding raptor surveys were carried out during the 2020 breeding season: May to July. Summary results from breeding raptor surveys are presented in Table 3-3 below and discussed in more detail in Section 4 of this report.

Table 3-3 Breeding Raptor Survey Results

Conservation Status	Species	Total number of observations recorded	Number of observations on site/within 500m	Activity of note	Breeding Status	Figure
BoCCI Red List	Kestrel	12	1	The majority of observations were of birds hunting, commuting or perched.	-	Appendix 2, Figure 3.1
BoCCI Green List	Buzzard	90	8	The majority of observations were of birds hunting, commuting or soaring. There were two observations of birds displaying and two observations of fledglings begging or perched.	Confirmed (Two Territories) Probable (One Territory)	Appendix 2, Figure 3.2/3.2.1
BoCCI Green List	Sparrowhawk	14	4	The majority of observations were of birds commuting or circling. There were two observations of sparrowhawk mobbing other raptors and one observation of a pair displaying.	Probable (Three Territories)	Appendix 2, Figure 3.3/3.3.1

3.2.5 Winter Walkover Survey Results

Winter walkover surveys were carried out during the 2020/2021 winter season: October 2020, January and February 2021. Summary results from winter walkover surveys are presented below in Table 3-4Table 3-2 and discussed in more detail in Section 4 of this report.

Table 3-4 Winter Walkover Survey Results

BoCCI Amber List	Sparrowhawk	3	3	3	Three observations of birds commuting or circling.	Appendix 2, Figure 4.9

3.2.6 Wildfowl Distribution Survey Results

Wildfowl distribution surveys were carried out in May 2020 and August 2020 to February 2021. Summary results from wildfowl distribution surveys are presented below in Table 3-5 and discussed in more detail in Section 4 of this report.

Table 3-5 Wildfowl Distribution Survey Results

Conservation Status	Species	Observations recorded during surveys	Number of birds recorded	Activity of note	Figure
Annex I	Golden Plover	2	110	Observed feeding and roosting in flooded fields	Appendix 2, Figure 5.1

Annex I	Whooper Swan	3	11	Observed feeding, roosting and commuting	Appendix 2, Figure 5.3
BoCCI Red List	Snipe	9	23	Majority of observations were of birds being flushed by observer. There was one observation of a bird drumming in May 2020.	Appendix 2, Figure 5.4/5.4.1

3.2.7 **Breeding Woodcock Survey Results**

Breeding woodcock surveys were carried out in May and June 2020. All observations are detailed in Table 3-6 below and discussed in further detail in Section 4 of this report.

3.2.9 Target Species Breeding Status Summary

While breeding status is assigned according to the evidence obtained during individual breeding bird survey types in Tables 3-1 to 3-7 above, Table 3-8 below provides the breeding status of target species observed during the 2020 breeding season surveys at Crowinstown.

Table 3-8 Target Species Breeding Status Summary

Target Species Breeding Status Summary						
Species	Overall Breeding Status	Figure				
Kestrel	Confirmed breeding – two territories (one partially within the wind farm site) Possible breeding – one territory (partially within the	Appendix 2, Figure 8.1				
Lapwing	wind farm site) Confirmed breeding – one territory (adjacent to the wind farm site)	Appendix 2, Figure 8.2				
Snipe	Probable breeding – one territory (adjacent to the wind farm site)	Appendix 2, Figure 8.3				
Woodcock	Probable breeding – one breeding area (min. one pair) (partially within the wind farm site)	Appendix 2, Figure 8.4				
Buzzard	Confirmed breeding – four territories (one partially within the wind farm site) Probable breeding – four territories (two partially within the wind farm site) Appendix 2, Figure 8.5					
Sparrowhawk	Confirmed breeding – one territory (partially within the wind farm site) Probable breeding – five territories (two partially within the wind farm site)	Appendix 2, Figure 8.6				

4. DISCUSSION

The following provides a synopsis of the findings of the surveys undertaken during the 2020 breeding season and the 2020/21 winter season (April 2020 – March 2021) for each of the target species recorded.

4.1 Golden Plover

Golden plover were recorded on 26 occasions during vantage point surveys. Observations ranged from an individual to a flock of 240 birds. There were four observations of golden plover landing on grassland habitats adjacent to the wind farm site. The majority of activity for this species was concentrated in improved agricultural grassland to the south-west of the wind farm site.

There were two observations of flocks commuting over the wind farm site during breeding walkover surveys. These flocks were of 50 and 85 birds.

Additionally, there were two observations of flocks of golden plover during wildfowl distribution surveys. Both observations were of flocks feeding or roosting, greater than 500m from the wind farm site.

There were no further observations of this species during surveys between April 2020 and March 2021.

4.2 Kingfisher

Kingfisher was recorded on one occasion during a wildfowl distribution survey at the wind farm site. On the 8^{th} of October, a kingfisher was observed commuting along a river approximately 600m to the west of the wind farm site.

There were no further observations of this species during surveys between April 2020 and March 2021.

4.3 **Merlin**

Merlin was recorded on only one occasion during vantage point surveys at the wind farm site. On the 10th of November, an individual was observed commuting. This observation was recorded within 500m of the wind farm site and was recorded below the potential collision height (PCH).

There were no further observations of this species during surveys between April 2020 and March 2021.

4.4 Peregrine Falcon

This species was recorded on five occasions during the vantage point surveys at the wind farm site. There were three observations of birds travelling, one of a bird hunting and one observation of a bird circling high. Four of these observations were partially within the wind farm site, and the remaining observations were within 500m of the wind farm site. There were four observations at PCH. No breeding evidence was observed during these surveys.

Peregrine was recorded on one occasion during winter walkover surveys. On the 15th of February, a peregrine was observed commuting near the sand quarry¹, within wind farm site.

There were no further observations of this species during surveys between April 2020 and March 2021. This species was not observed to be breeding on, or within 2km of, the wind farm site.

¹ The quarry within the wind farm site is for sand extraction and therefore has no suitable cliff faces for breeding peregrine.

4.5 Whooper Swan

Whooper swan were recorded on five occasions during vantage point surveys at the wind farm site. Observations ranged from a pair to eleven birds. All observations were of birds commuting over the wind farm site and all observations were at PCH.

This species was recorded on only two occasions during the winter walkover surveys. On the 30th of October, six birds were seen feeding on a small lake, approximately 200m from the wind farm site. Later the same day, a flock of six (presumably the same birds) were observed commuting, travelling away from the small lake. No further observations of this species were recorded during this survey type.

Whooper swan were observed on three occasions during the wildfowl distribution surveys in January and February 2021. There was one observation of birds roosting, feeding and commuting. There was one observation within 500m of the wind farm site.

There were no further observations of this species during surveys between April 2020 and March 2021.

4.6 Wood Sandpiper

Wood sandpiper were recorded on only one occasion during a winter walkover survey at the wind farm site. On the 30th of October, a bird was observed feeding within a flooded grass field

There were no further observations of this species during surveys between April 2020 and March 2021.

4.7 **Curlew**

Curlew was recorded on only one occasion during vantage point surveys at the wind farm site. On the 19th of March, an individual was observed commuting over the wind farm site. This observation was recorded at PCH.

There were no further observations of this species during surveys between April 2020 and March 2021.

4.8 **Kestrel**

Kestrel were observed on 43 occasions during vantage point surveys. Forty-one observations were recorded within, or partially within, 500m of the wind farm site. Twenty-six of the flights were recorded at PCH. The majority of flight activity involved birds hunting or commuting. There was one confirmed and one possible breeding territory identified during the 2020 breeding season. An adult kestrel was observed circling with prey over suitable breeding habitat, confirming breeding locally. A pair of kestrel were observed mating to the south of the wind farm site, suggesting a possible breeding territory at this location. No further evidence of breeding at this location was observed.

This species was recorded on six occasions during breeding walkover surveys. All observations were of birds hunting or commuting. There were four observations within 500m of the wind farm site. There was one observation of a bird carrying prey, confirming breeding locally, to the northwest of the wind farm site.

This species was recorded on twelve occasions during breeding raptor surveys. One of these observations were recorded partially within 500m of the wind farm site. All observations were of birds hunting or commuting.

During winter walkover surveys kestrel were observed on three occasions. An individual was observed hunting on three occasions, once in October 2020 and twice in January 2021. Two of these observations were within the wind farm site, with the third being within 500m of the wind farm site.

Additionally, kestrel was recorded on seven occasions as an incidental observation during surveys. The majority of observations were of birds hunting or commuting. There was one observation of a juvenile bird within the wind farm site, close to the quarry. The exact location of this bird was not mapped.

There were no further observations of this species during surveys between April 2020 and March 2021. surveys between April 2020 and March 2021. There were two confirmed and one possible territory identified in the 2020 breeding season. There was one confirmed and one possible breeding territories located within, or partially within, the wind farm site. See Appendix 2, Figure 8.1 for the location of all breeding territories from the 2020 breeding season.

4.9 **Lapwing**

Lapwing were recorded on three occasions during the vantage point surveys. Observations ranged from an individual to a flock of 40 birds. All observations were of birds commuting. There were two observations recorded at PCH.

This species was recorded on only one occasion during the breeding walkover surveys. An adult was observed with a fledged juvenile feeding at the edge of a small pond. This confirms breeding at this location, approximately 50m east of the wind farm site. Lapwing were also recorded on one occasion during the winter walkover surveys. A flock of 55 birds were observed commuting over the wind farm site on the 21st of January 2021.

Additionally, a pair of lapwing were observed commuting, to the south of the wind farm site, as an incidental observation during a breeding raptor survey.

There were no further observations of this species during surveys between April 2020 and March 2021. There was one confirmed breeding territory within 500m of the wind farm site in the 2020 breeding season. See Appendix 2, Figure 8.2 for the location of breeding territory.

4.10 Snipe

Snipe were observed on only three occasions during vantage point surveys. All observations were recorded within 500m of the wind farm site. There was one observation of snipe within PCH. There were two observations of birds commuting and one of a bird being flushed.

During breeding walkover surveys snipe were observed on only one occasion. This observation was of a bird drumming adjacent to the wind farm site. Additionally, snipe were observed on two occasions during winter walkover surveys. Both observations were of birds commuting and were partially within the wind farm site.

Snipe were recorded on nine occasions during the wildfowl distribution surveys, up to one kilometre from the wind farm site. Three of these observations were of birds within the wind farm site. The majority of observations were of birds being flushed or commuting. There was one observation of a snipe drumming approximately one kilometre from the wind farm site.

There were no further observations of this species during breeding season surveys. In total, there were two breeding territories identified in the 2021 breeding season, one of which was adjacent to the wind farm site, with the remaining territory located approximately one kilometre from the wind farm site. See Appendix 2, Figure 8.3 for the location of all breeding territories from the 2020 breeding season.

4.11 Woodcock

Woodcock were observed on eight occasions during the dedicated breeding woodcock surveys. There were seven observations of birds roding and one observation of a bird commuting. All observations were located in the same area, to the west of the wind farm site. There was a minimum of one breeding pair located at this breeding area.

There were no further observations of this species during breeding season surveys. There was one breeding area located partially within the wind farm site in the 2020 breeding season, with a minimum of one pair being recorded. See Appendix 2, Figure 8.4 for the location of all breeding territories from the 2020 breeding season.

4.12 **Buzzard**

Buzzard were observed on 252 occasions during vantage point surveys. Two hundred and thirty observations were recorded within, or partially within, 500m of the wind farm site. One hundred and seventy-five of the flights were recorded at PCH. The majority of flight activity was birds travelling, hunting or soaring. There were twelve observations related to breeding behaviours, including displaying and observations of recently fledged chicks begging. These observations were all related to one confirmed breeding territory and four probable breeding territories. Three of these territories were within, or partially within, the wind farm site. The confirmed territory was adjacent to the wind farm site to the north-west.

During breeding walkover surveys buzzard were observed on 35 occasions. All observations were of between one or three birds. All observations were within, or partially within, 500m of the wind farm site. All observations were of birds hunting, commuting or soaring. There was no observations relating to breeding behaviour during these surveys.

This species was recorded on 90 occasions during breeding raptor surveys. Eight of these observations were recorded within 500m of the wind farm site. There were five observations relating to breeding behaviour. There were three observations of birds displaying, one of a bird carrying food to a nest site and two observations of recently fledged chicks begging. In total, there were two confirmed and one probable breeding territories located during these surveys. All of which were greater than one kilometre from the wind farm site.

Buzzard were recorded on twenty occasions during the winter walkover surveys. All of these observations were within 500m of the wind farm site, and consisted of birds hunting, commuting or circling.

Additionally, buzzard were observed on 37 occasion as incidental records. The majority of observations were of birds commuting, hunting or perched. There was one observation of two begging chicks being fed by an adult, confirming breeding at this location.

In summary, there were three confirmed and four probable breeding territories identified in the 2020 breeding season. There were two probable breeding territories located within, or partially within, the wind farm site. It is noted that the probable breeding territories were identified primarily on displaying birds in these areas, using this method to identify territories can be misleading as birds may display over multiple areas of suitable habitat before establishing a nesting territory with a mate. As such, the number of probable breeding territories is likely to be overestimated. While there were several hundred observations of buzzard during surveys, these observations are likely to be repeat observations of resident birds at the wind farm site. See Appendix 2, Figure 8.5 for the location of all breeding territories from the 2020 breeding season.

4.13 Long-eared Owl

Long-eared owl was recorded on only one occasion as an incidental observation during a breeding woodcock survey. On the 11th of June, an individual was observed hunting in woodland, within 500m of the wind farm site.

There were no further observations of this species during surveys between April 2020 and March 2021.

4.14 **Sparrowhawk**

Sparrowhawk were recorded on 39 occasions during VP surveys. Thirty-six of these flights were recorded within 500m of the wind farm site. Twenty of these flights were recorded at PCH. The majority of observations were of birds travelling or circling. There were nine observations relating to breeding behaviour, eight of which were displaying birds. There was one observation of a bird carrying food to a nest, confirming breeding in the area. During these surveys there was one confirmed and three probably breeding territories identified. There was one confirmed and two probable territories observed within, or partially within, the wind farm site.

This species was recorded on only two occasions during breeding walkover surveys. On both occasions a bird was observed travelling within 500m of the wind farm site. No breeding activity was observed during these surveys.

Sparrowhawk was recorded on fourteen occasions during breeding raptor surveys. The majority of observations were of birds commuting or circling. There were three observations related to breeding activity. There was one observation of a bird displaying in May and an observation of a sparrowhawk mobbing a kestrel and another of a sparrowhawk mobbing a buzzard. In total there were three probable breeding territories identified during this survey type.

Sparrowhawk were recorded on only three occasions during winter walkover surveys. All observations were of birds commuting or circling and were within 500m of the wind farm site.

Additionally, there were four incidental observations of sparrowhawk during wildfowl distribution and breeding woodcock surveys. All observations were of individuals hunting or commuting.

In summary, there were one confirmed and five probable breeding territories identified in the 2020 breeding season. There was one confirmed and two probable breeding territories located within, or partially within, the wind farm site. It is noted that the probable breeding territories were identified primarily on displaying birds in these areas, using this method to identify territories can be misleading as birds may display over multiple areas of suitable habitat before establishing a nesting territory with a mate. As such, the number of probable breeding territories is likely to be overestimated. See Appendix 2, Figure 8.6 for the location of all breeding territories from the 2020 breeding season.

4.15 Red listed passerines (Meadow pipit, Redwing)

Meadow pipit were recorded on seventeen occasions at the wind farm site. This species is red-listed, due to a decline in its breeding population in recent years. There were only three observations of meadow pipit during the breeding season. Additionally, there was one observation of a meadow pipit displaying in March.

Redwing were observed on thirteen occasions, throughout the winter season. This species is red-listed, due to a decline in its wintering population in recent years.

As per SNH guidance, it is generally considered that passerine species are not significantly impacted by wind farms. Therefore, no significant impacts are anticipated on this breeding population from the wind farm site.

5. CONCLUSION

Key impacts likely to result from a proposed wind farm on local avian receptors could include habitat loss, disturbance, displacement (including barrier effect) and collision risk. Collision risk should be a key consideration at the assessment stage for many of the target species recorded at Crowinstown and in particular kestrel and buzzard. However, until the collision risk analysis is undertaken, this impact cannot be considered in any detail. All findings should be considered in the context of two full years of surveys, i.e. two breeding seasons and two non-breeding seasons. Two years of flight activity data is required to inform a robust collision risk analysis. The potential for impacts such as habitat loss and disturbance displacement to result are discussed below.

Kestrel were observed regularly at the wind farm site. They were recorded utilizing the wind farm site for commuting, foraging and breeding. There were two confirmed and one probable breeding territory identified during the 2020 breeding season. There was one confirmed and one probable breeding territory located partially within the wind farm site. The wind farm site could result in habitat loss and disturbance/displacement from these breeding territories.

A lapwing territory was identified during the 2020 breeding season, within 50m of the wind farm site. The wind farm site could result in the direct (physical) or indirect (disturbance/displacement) loss of habitat for this species. This potential impact should be considered in greater detail at the assessment stage.

An occupied breeding woodcock area was recorded to the west of the wind farm site, with a minimum of one breeding pair present. The wind farm site could result in the direct or indirect (disturbance/displacement) loss of habitat for this species. These potential impacts should be considered in greater detail at the assessment stage. Woodcock were not recorded outside of the dedicated breeding woodcock surveys. Additionally, there was two probable breeding territories for snipe, One within 500m of the wind farm site. This species was only recorded infrequently during the survey period. There is the potential for habitat loss and disturbance/displacement, particularly around the breeding territories identified.

Buzzard were confirmed to have nested at two locations, one of which was partially within 500m the wind farm site, during the 2020 breeding season. There were four probable breeding territories also identified, two of which were partially within the wind farm site. Buzzards were also recorded frequently during all survey types in both the breeding and winter seasons. There was one confirmed sparrowhawk breeding territory and five probable breeding territories identified in the 2020 breeding season. There was one confirmed and two probable breeding territories located partially within the wind farm site. Sparrowhawk were recorded occasionally throughout the survey period, April 2020 to March 2021.

For the species listed above, the wind farm site could result in the direct or indirect (disturbance/displacement) loss of habitat for these species. These potential impacts should be considered in greater detail at the assessment stage, when two years of data carried out to SNH (2017) are available. If significant effects are identified during the impact assessment, likely impacts could be mitigated against particularly in relation to specific breeding territories. For example, avoiding any breeding areas during the construction phase and only undertaking vegetation clearance outside of the breeding season would reduce some of the risk associated with these impacts in relation to species breeding within, or adjacent to, the wind farm site during the construction phase. Another potential mitigation measure could include suitable disturbance buffers can also be implemented around breeding territories to reduce the impact of the wind farm site.

Given the frequency of observations of some species at the wind farm site, collision risk is likely to be a key consideration for some species (e.g. buzzard/kestrel), however the magnitude of this impact will only be fully understood following collision risk analysis of the full two-year dataset.

Kingfisher, merlin, peregrine, whooper swan, wood sandpiper, curlew and long-eared owl were also recorded during surveys. These species were all recorded infrequently and in low numbers at the wind farm site, with no breeding evidence observed, and are therefore unlikely to be adversely affected by the wind farm site.

A full two years of bird survey data will provide more details and further context on the overall use of the site by all species discussed above and allow for a more robust identification and assessment of likely impacts than is possible based on the data collected during one year of surveys alone.

Species	Latin Name
Robin	Erithacus rubecula
Rook	Corvus frugilegus
Sand Martin	Riparia riparia
Sedge Warbler	Acrocephalus schoenobaenus
Siskin	Carduelis spinus
Skylark	Alauda arvensis
Song Thrush	Turdus philomelos
Starling	Sturnus vulgaris
Stonechat	Saxicola torquata
Swallow	Hirundo rustica
Swift	Apus apus
Teal	Anas crecca
Water Rail	Rallus aquaticus
Willow Warbler	Phylloscopus trochilus
Woodpigeon	Columba palumbus
Wren	Troglodytes troglodytes

											circling together in one area then come to site then back out and disappear	
BZ015	VP2	09/05/2020	14:48	Buzzard	2	288	0	0	0	288	conifer plantation and improved agricultural grassland; circling together high	KOC
BZ016	VP2	09/05/2020	15:11	Buzzard	1	19	0	9	10	0	conifer plantation; gliding, descending	KOC
K002	VP2	09/05/2020	15:30	Kestrel	1	486	0	15	471	0	improved agricultural grassland; circling, mobbes bz then circle together, bz leaves k glides circle back, hunts, dives down	KOC
BZ017	VP2	09/05/2020	15:32	Buzzard	1	122	0	0	122	0	improved agricultural grassland; circling, mobbes bz then circle together, bz leaves k glides circle back, hunts, dives down	KOC
BZ018	VP3	13/05/2020	09:12	Buzzard	1	62	0	42	20	0	improved agricultural grassland and wet willow- alder-ash woodland; flying through site	KOC
BZ019	VP3	13/05/2020	09:15	Buzzard	2	494	0	0	494	0	improved agricultural grassland; circling together then separately, desceding	KOC
BZ020	VP3	13/05/2020	10:10	Buzzard	1	16	0	5	11	0	mixed broadleaved woodland; flying, descending	KOC
BZ021	VP3	13/05/2020	10:16	Buzzard	1	210	0	0	210	0	improved agricultural grassland; circling, then diving down	KOC
	VP3	13/05/2020	10:47	Grey Heron	1	89	0	76	13	0	improved agricultural grassland; flying, commuting	KOC
BZ022	VP3	13/05/2020	10:53	Buzzard	1	61	8	53	0	0	improved agricultural grassland; flying, circling	KOC
	VP3	13/05/2020	10:57	Black-headed Gull	1	53	0	43	10	0	improved agricultural grassland; flying, commuting	KOC
BZ023	VP3	13/05/2020	11:06	Buzzard	1	28	0	3	25	0	improved agricultural grassland and conifer plantation; gliding, descending	KOC
BZ024	VP3	13/05/2020	11:59	Buzzard	1	298	0	115	183	0	improved agricultural grassland; circling, rising, gliding towards forestry	KOC
BZ025	VP3	13/05/2020	12:07	Buzzard	1	116	0	30	86	0	improved agricultural grassland and wet willow- alder-ash woodland; gliding, descending	KOC
BZ026	VP3	13/05/2020	13:09	Buzzard	1	528	0	0	478	50	improved agricultural grassland and wet willow- alder-ash woodland; circling, gliding	KOC

Map Ref.	VP	Date	Time	Species	Number	Duration of flight (s)	Band 1 (0- 10m)	Band 2 (10- 25m)	PCH (25- 175m)	Band 4 (>175m)	Habitat and activity	Surveyor
BZ027	VP3	13/05/2020	13:25	Buzzard	1	219	0	28	191	0	improved agricultural grassland; circling, gliding, descending	KOC
BZ028	VP3	13/05/2020	13:36	Buzzard	1	23	0	5	18	0	improved agricultural grassland; flying, mobbed by hc	KOC
BZ029	VP3	13/05/2020	13:58	Buzzard	1	355	0	20	335	0	improved agricultural grassland and conifer plantation; gliding, descending to forestry then lifts off again, joins other 2 bz, circle together, then get back to forestry	KOC
BZ030	VP3	13/05/2020	14:00	Buzzard	2	840	0	0	440	400	improved agricultural grassland and conifer plantation; 2 bz join first bz, circle together laso first bz leaves, then 2 circle high, then separate and one glides and descends towards forestry.	KOC
BZ031	VP3	13/05/2020	14:29	Buzzard	1	102	0	82	20	0	conifer plantation and improved agricultural grassland; flying, gliding	KOC
BZ032	VP3	13/05/2020	14:36	Buzzard	1	129	0	30	99	0	improved agricultural grassland; circling, gliding, descending	KOC
BZ033	VP3	13/05/2020	14:57	Buzzard	2	227	0	0	50	177	improved agricultural grassland; circling together high, then separate	KOC
BZ034	VP1	21/05/2020	09:39	Buzzard	1	215	0	0	215	0	mixed broadleaved woodland and improved agricultural grassland; circling, gliding	KOC
BZ035	VP1	21/05/2020	09:42	Buzzard	1	594	0	0	304	290	conifer plantation and improved agricultural grassland; circling, rising high, then descend and dive down	KOC
	VP1	21/05/2020	10:35	Lesser Black- backed Gull	21	260	0	40	220	0	improved agricultural grassland; circling large gulls (lb)	KOC
BZ036	VP1	21/05/2020	10:36	Buzzard	1	237	0	0	237	0	improved agricultural grassland and mixed broadleaved woodland; circling, gliding, descending	KOC
BZ037	VP1	21/05/2020	10:56	Buzzard	1	58	0	7	51	0	improved agricultural grassland; circling, gliding	KOC
BZ038	VP1	21/05/2020	11:00	Buzzard	1	122	0	0	122	0	conifer plantation and improved agricultural grassland; flying, mobbed by hc	KOC
BZ039	VP1	21/05/2020	11:12	Buzzard	1	174	0	0	174	0	conifer plantation and improved agricultural grassland; circling mobbed by jd	KOC

BZ076	VP3	02/06/2020	16:41	Buzzard	1	61	0	41	20	0	improved agricultural grassland and conifer plantation; gliding, circling	KOC
BZ077	VP3	02/06/2020	16:42	Buzzard	1	58	0	10	48	0	improved agricultural grassland and conifer plantation; gliding, circling	KOC
BZ078	VP3	02/06/2020	16:46	Buzzard	1	43	0	43	0	0	improved agricultural grassland; gliding, flying	KOC
BZ079	VP3	02/06/2020	16:53	Buzzard	1	22	0	5	17	0	improved agricultural grassland; hunting, hovering	KOC
BZ080	VP1	08/06/2020	10:38	Buzzard	1	91	0	5	86	0	improved agricultural grassland; gliding, descending, land on a pole.	KOC
BZ081	VP1	08/06/2020	10:49	Buzzard	1	142	0	127	15	0	mixed broadleaved woodland; gliding, circling above small patch of woodland	KOC
BZ082	VP1	08/06/2020	10:58	Buzzard	1	257	0	130	27	0	improved agricultural grassland; circling, rising higher, descending then gliding	KOC
BZ083	VP1	08/06/2020	11:04	Buzzard	1	78	0	68	10	0	improved agricultural grassland and mixed broadleaved woodland; circling, gliding, descending	KOC

Map Ref.	VP	Date	Time	Species	Number	Duration of flight (s)	Band 1 (0- 10m)	Band 2 (10- 25m)	PCH (25- 175m)	Band 4 (>175m)	Habitat and activity	Surveyor
K003	VP1	08/06/2020	11:13	Kestrel	1	343	0	0	343	0	conifer plantation and improved agricultural grassland; circling, rising, gliding then descending a bit and mating.	KOC
BZ084	VP1	08/06/2020	11:24	Buzzard	2	620	0	30	590	0	improved agricultural grassland and conifer plantation; flying, gliding together, then separately	KOC
BZ085	VP1	08/06/2020	11:34	Buzzard	2	116	0	0	116	0	conifer plantation and improved agricultural grassland; circling together then separate, glide to opposite directions.	KOC
	VP1	08/06/2020	11:47	Lesser Black- backed Gull	2	130	0	35	95	0	conifer plantation and improved agricultural grassland; flying, gliding one after another.	KOC
BZ086	VP1	08/06/2020	11:50	Buzzard	2	119	0	0	119	0	improved agricultural grassland and conifer plantation; circling together, glide	KOC
BZ087	VP1	08/06/2020	11:58	Buzzard	1	34	0	34	0	0	improved agricultural grassland; circling, gliding	KOC
BZ088	VP1	08/06/2020	12:20	Buzzard	2	627	0	0	627	0	improved agricultural grassland; one bz, circles, glides, then fast move towards another bz. they chase one another, circle together, then separate again.	KOC
BZ089	VP1	08/06/2020	12:47	Buzzard	1	154	0	0	154	0	improved agricultural grassland and conifer plantation; circling, then gliding up and down, displaying.	KOC
BZ090	VP1	08/06/2020	12:53	Buzzard	1	55	0	0	55	0	improved agricultural grassland; circling, gliding	KOC
BZ091	VP1	08/06/2020	13:03	Buzzard	1	180	0	20	160	0	improved agricultural grassland; circling then gliding, landing on a pole.	KOC
BZ092	VP1	08/06/2020	13:18	Buzzard	1	610	0	0	610	0	improved agricultural grassland and mixed broadleaved woodland; circling, displaying, gliding in one area.	KOC
	VP1	08/06/2020	14:20	Grey Heron	1	58	10	48	0	0	improved agricultural grassland; flying along the river.	KOC
BZ093	VP1	08/06/2020	14:35	Buzzard	1	99	0	0	99	0	improved agricultural grassland and conifer plantation; circling, gliding	KOC
SH004	VP1	08/06/2020	14:46	Sparrowhawk	1	217	0	0	167	50	conifer plantation and improved agricultural grassland; gliding, soaring, circling	KOC

Map Ref.	VP	Date	Time	Species	Number	Duration of flight (s)	Band 1 (0- 10m)	Band 2 (10- 25m)	PCH (25- 175m)	Band 4 (>175m)	Habitat and activity	Surveyor
BZ094	VP1	08/06/2020	14:56	Buzzard	1	41	0	41	0	0	improved agricultural grassland; gliding, hunting	KOC
BZ095	VP1	08/06/2020	15:02	Buzzard	1	116	0	0	116	0	improved agricultural grassland and mixed broadleaved woodland; gliding, circling, displaying	KOC
SH005	VP1	08/06/2020	15:28	Sparrowhawk	1	31	0	5	26	0	conifer plantation; circling, diving down	KOC
BZ096	VP1	08/06/2020	15:32	Buzzard	2	117	0	85	32	0	improved agricultural grassland and mixed broadleaved woodland; circling together, gliding	KOC
BZ097	VP1	08/06/2020	15:38	Buzzard	1	730	0	50	480	200	improved agricultural grassland; flying, gliding then circling, rising, joins another 3 bz.	KOC
BZ098	VP1	08/06/2020	15:40	Buzzard	3	600	0	0	300	300	improved agricultural grassland; circle together, joined by first bz; 4 of them circle and rise.	KOC
BZ099	VP1	08/06/2020	15:57	Buzzard	2	304	0	0	304	0	improved agricultural grassland and conifer plantation; circing together, then separate.	KOC
BZ100	VP1	08/06/2020	16:14	Buzzard	1	137	0	20	117	0	improved agricultural grassland; circling, gliding, descending	KOC
BZ101	VP1	08/06/2020	16:26	Buzzard	3	232	0	0	232	0	improved agricultural grassland; 2 bz circling together, another just below them, then disappear.	KOC
	VP1	08/06/2020	16:35	Grey Heron	1	77	11	66	0	0	improved agricultural grassland; flying along the river.	KOC
BZ102	VP1	08/06/2020	16:46	Buzzard	1	38	18	20	0	0	improved agricultural grassland; hunting in a grassland, landing on a pole.	KOC
BZ103	VP1	08/06/2020	16:54	Buzzard	1	27	0	27	0	0	improved agricultural grassland; gliding	KOC
BZ104	VP2	09/06/2020	11:04	Buzzard	1	3	3	0	0	0	conifer plantation; perching on a pole, then flying down into young forestry plantation.	KOC
BZ105	VP2	09/06/2020	11:56	Buzzard	1	185	0	0	185	0	mixed broadleaved woodland and improved agricultural grassland; circling, gliding	KOC
BZ106	VP2	09/06/2020	12:14	Buzzard	1	8	5	3	0	0	improved agricultural grassland and conifer plantation; gliding, descending	KOC
K004	VP2	09/06/2020	12:15	Kestrel	1	28	0	28	0	0	improved agricultural grassland; hunting, diving down	KOC

Map Ref.	VP	Date	Time	Species	Number	Duration of flight (s)	Band 1 (0- 10m)	Band 2 (10- 25m)	PCH (25- 175m)	Band 4 (>175m)	Habitat and activity	Surveyor
K005	VP2	09/06/2020	12:21	Kestrel	1	146	0	30	116	0	improved agricultural grassland; circling, with prey in tallons, then gliding away.	KOC
K006	VP2	09/06/2020	12:57	Kestrel	1	172	0	34	138	0	improved agricultural grassland and conifer plantation; hunting, flying	KOC
K007	VP2	09/06/2020	13:08	Kestrel	1	202	0	70	132	0	conifer plantation; flying, hunting over young forestry.	KOC
K008	VP2	09/06/2020	13:41	Kestrel	1	34	14	20	0	0	conifer plantation and improved agricultural grassland; hunting, gliding	KOC
K009	VP2	09/06/2020	14:24	Kestrel	1	328	5	120	203	0	conifer plantation and improved agricultural grassland; hunting	KOC
BZ107	VP2	09/06/2020	14:49	Buzzard	3	225	0	0	225	0	improved agricultural grassland; circling together, calling, later separate.	KOC
	VP2	09/06/2020	15:38	Lesser Black- backed Gull	2	62	0	30	32	0	conifer plantation and improved agricultural grassland; flying, commuting through site.	KOC
BZ108	VP2	09/06/2020	16:46	Buzzard	1	5	5	0	0	0	improved agricultural grassland; flying, perching on a tree.	KOC
	VP2	09/06/2020	17:08	Black-headed Gull	1	56	56	0	0	0	improved agricultural grassland; flying in circles, land in pond.	KOC
BZ109	VP3	01/07/2020	11:41	Buzzard	1	7	0	2	5	0	improved agricultural grassland and conifer plantation; gliding, descending over forestry	KOC
BZ110	VP3	01/07/2020	13:06	Buzzard	1	21	16	0	0	0	improved agricultural grassland; calling, perching, flying, calling, landing on a tree top then flying down and back on a tree. perching again, then fly away	KOC
BZ111	VP3	01/07/2020	13:06	Buzzard	1	3	3	0	0	0	improved agricultural grassland; perching, flying, perching on a tree top close to other bz, then flying away out of view	KOC
BZ112	VP3	01/07/2020	14:22	Buzzard	1	69	0	26	43	0	improved agricultural grassland and mixed broadleaved woodland; flying, gliding	KOC
BZ113	VP3	01/07/2020	15:24	Buzzard	1	124	0	32	92	0	improved agricultural grassland; gliding, descending	KOC
	VP3	01/07/2020	15:58	Lesser Black- backed Gull	1	19	0	7	12	0	improved agricultural grassland; flying towards the lake	KOC

Map Ref.	VP	Date	Time	Species	Number	Duration of flight (s)	Band 1 (0- 10m)	Band 2 (10- 25m)	PCH (25- 175m)	Band 4 (>175m)	Habitat and activity	Surveyor

BZ153	VP3	13/08/2020	17:15	Buzzard	1	168	40	128	0	0	improved agricultural grassland; beggind calls, flying, gliding, chasing h. another begging call can be heard nearby	KOC
	VP3	13/08/2020	17:17	Grey Heron	1	83	31	52	0	0	improved agricultural grassland; flying, chased by bz lands on a bush next to other h	KOC
	VP3	13/08/2020	17:18	Grey Heron	1	34	15	19	0	0	improved agricultural grassland; flying, landing	KOC
	VP3	13/08/2020	17:21	Grey Heron	2	56	30	26	0	0	improved agricultural grassland; flying, together fly scared by bz	KOC
BZ154	VP3	13/08/2020	17:21	Buzzard	1	52	37	15	0	0	improved agricultural grassland; flying, chases 2 h, then fly away	KOC
	VP3	13/08/2020	17:59	Grey Heron	1	79	0	64	15	0	improved agricultural grassland; flying	KOC
SH011	VP3	13/08/2020	18:05	Sparrowhawk	1	19	0	19	0	0	improved agricultural grassland; flying, perching	KOC
	VP3	13/08/2020	19:17	Grey Heron	1	61	0	0	61	0	improved agricultural grassland; flying, calling	KOC
BZ155	VP3	13/08/2020	19:41	Buzzard	1	26	26	0	0	0	improved agricultural grassland; flying low, perching	KOC
SH012	VP3	13/08/2020	20:06	Sparrowhawk	1	2	2	0	0	0	hedgerows; perching, gliding, landing, perching on a pole, gliding crossing the road, landing in a bush	KOC
BZ156	VP3	13/08/2020	20:42	Buzzard	1	15	15	0	0	0	improved agricultural grassland; feeding, flying, perching	KOC
BZ157	VP3	13/08/2020	20:54	Buzzard	1	7	7	0	0	0	improved agricultural grassland; feeding, running on grass, calling, flying, feeding, running on grass for over 30min, begging calling, then flies away, lands in nearby bushes, keeps calling.	KOC
	VP1	21/09/2020	06:55	Pied Wagtail	1	11	11	0	0	0	improved agricultural grassland; travelled over vp and off over n52.	PC
	VP1	21/09/2020	07:26	Pied Wagtail	1	5	5	0	0	0	improved agricultural grassland; travelled over vp from directly in front and off behind the vp.	PC

Map Ref.	VP	Date	Time	Species	Number	Duration of flight (s)	Band 1 (0- 10m)	Band 2 (10- 25m)	PCH (25- 175m)	Band 4 (>175m)	Habitat and activity	Surveyor
BZ158	VP1	21/09/2020	12:24	Buzzard	1	143	0	143	0	0	improved agricultural grassland; bz003 and bz004 appeared together before bz003 headed off on its own in south easterly direction, leaving bz004 circling on its own.	PC
BZ159	VP1	21/09/2020	12:24	Buzzard	1	197	0	197	0	0	improved agricultural grassland; carried on circling over viewshed then followed bz003 in a more easterly direction.	PC
BZ160	VP3	22/09/2020	07:35	Buzzard	1		0	0	0	0	improved agricultural grassland and mixed broadleaved woodland; bird heard calling in distance but not seen. location marked on map is best estimated position.	PC
BZ161	VP3	22/09/2020	08:05	Buzzard	1	11	11	0	0	0	improved agricultural grassland; brief view of bird flying over road from behind vp, lost behind trees to right of vp.	PC
	VP3	22/09/2020	08:37	Grey Heron	1	33	33	0	0	0	improved agricultural grassland; flew up out of field to left of vp, travelled low in northerly direction then lost behind hummocks below vp.	PC
BZ162	VP3	22/09/2020	09:05	Buzzard	1	12	12	0	0	0	improved agricultural grassland; flushed up from field below vp by 3 ravens. looked like it had been on the ground. lost behind hummocks.	PC
	VP3	22/09/2020	09:17	Pied Wagtail	1	8	8	0	0	0	improved agricultural grassland; flew from behind vp into viewshed heading east. lost behind trees.	PC
SH013	VP3	22/09/2020	09:20	Sparrowhawk	1	14	14	0	0	0	improved agricultural grassland; male came up from west of vp mobbed by 4 rooks and a meadow pipit. headed east, lost behind trees. didn't see exactly where it came from as i was noting pw005	PC
	VP3	22/09/2020	10:20	Lesser Black- backed Gull	1	58	0	58	0	0	improved agricultural grassland; travelled across viewshed west to east, occasionally circling and soaring.	PC
	VP3	22/09/2020	10:20	Pied Wagtail	1		0	0	0	0	cultivated and built land; feeding around houses and gardens to west of vp	PC

Map Ref.	VP	Date	Time	Species	Number	Duration of flight (s)	Band 1 (0- 10m)	Band 2 (10- 25m)	PCH (25- 175m)	Band 4 (>175m)	Habitat and activity	Surveyor
	VP3	22/09/2020	10:50	Grey Heron	1	32	32	0	0	0	improved agricultural grassland and mixed broadleaved woodland; flew up from in front of vp and headed in northerly direction. probably same bird as h003.	PC
	VP2	25/09/2020	07:40	Pied Wagtail	3		0	0	0	0	improved agricultural grassland; one adult, two juveniles feeding around pool of water near vp. occasional flitting.	PC
BZ163	VP2	25/09/2020	07:45	Buzzard	1	17	17	0	0	0	improved agricultural grassland; flew up from in front of vp, being mobbed by rook. lost behind treeline.	PC
	VP2	25/09/2020	07:50	Pied Wagtail	2	22	22	0	0	0	improved agricultural grassland; pair flew past vp, lost in trees to right of vp.	PC
	VP2	25/09/2020	08:15	Pied Wagtail	2	25	25	0	0	0	improved agricultural grassland; flew across in front of vp heading west. lost in trees., pied wagtails flitting around vp all morning.	PC
SH014	VP2	25/09/2020	08:47	Sparrowhawk	1	47	38	9	0	0	improved agricultural grassland; female travelled over viewshed heading in northerly direction.	PC
K018	VP2	25/09/2020	09:02	Kestrel	1	35	35	0	0	0	improved agricultural grassland; female or juvenile mobbed by 5 rooks as it travelled west over viewshed.	PC
	VP2	25/09/2020	09:20	Little Grebe	1		0	0	0	0	improved agricultural grassland and lakes and ponds; one on pool in field surrounded by water lilies when stretching my legs. not sure if it flew in or was there all along., still on pool when i left vp2. not sure if the pool is permanent.	PC
BZ164	VP2	25/09/2020	09:30	Buzzard	1	87	62	25	0	0	improved agricultural grassland; travelling over viewshed, circling to gain height. lost against clouds	PC
SH015	VP2	25/09/2020	09:30	Sparrowhawk	1	12	12	0	0	0	improved agricultural grassland; spotted whilst watching bz008 so timing is estimated. travelled north, didn't see where as i was still watching bz008.	PC

Map Ref.	VP	Date	Time	Species	Number	Duration of flight (s)	Band 1 (0- 10m)	Band 2 (10- 25m)	PCH (25- 175m)	Band 4 (>175m)	Habitat and activity	Surveyor
SN001	VP2	25/09/2020	09:32	Snipe	2	37	26	11	0	0	improved agricultural grassland; came up out of field in front of vp, calling. travelled west over viewshed, lost against clouds.	PC
K019	VP2	25/09/2020	10:34	Kestrel	1	15	15	0	0	0	improved agricultural grassland; came up from behind hillock in front of vp. hovered a couple of times then dropped back down., looked like female or juvenile - same bird as k006?	PC
K020	VP2	25/09/2020	11:50	Kestrel	1	53	53	0	0	0	improved agricultural grassland; came from same spot as k011. hovered a couple of times, dropped down then came back up. no prey visible. headed north, lost below treeline., looked like female or juvenile - same bird as k006?	PC
BZ165	VP3	06/10/2020	13:24	Buzzard	1	0					improved agricultural grassland; perching	KOC
K021	VP3	06/10/2020	13:34	Kestrel	1	363	27	124	212		improved agricultural grassland; hunting, flying, hunting, then flying chased by rn, later hunting again	KOC
BZ166	VP3	06/10/2020	14:09	Buzzard	1	159			159		improved agricultural grassland; circling, descending, gliding	KOC
BZ167	VP3	06/10/2020	14:17	Buzzard	1	51		28	23		improved agricultural grassland; gliding	KOC
BZ168	VP3	06/10/2020	14:30	Buzzard	1	58			58		improved agricultural grassland; circling, gliding, fast descending	KOC
BZ169	VP3	06/10/2020	14:51	Buzzard	1	112			112		improved agricultural grassland; circling	KOC
BZ170	VP3	06/10/2020	15:15	Buzzard	3	304		45	259		improved agricultural grassland; flying, gliding, circling, circling together, one goes away, other 2 continue	KOC
K022	VP3	06/10/2020	15:17	Kestrel	1	29			29		improved agricultural grassland; flying, chased by	KOC

SH018	VP3	10/11/2020	12:28	Sparrowhawk	1	129			129		improved agricultural grassland; circling, gliding, mobbed by 2 hc	KOC
BZ184	VP3	10/11/2020	12:35	Buzzard	1	28		28			improved agricultural grassland, bog woodland and scrub; flying	KOC
BZ185	VP3	10/11/2020	12:48	Buzzard	1	34		16	18		improved agricultural grassland; circling, gliding	KOC
K031	VP3	10/11/2020	13:01	Kestrel	1	62	4	58			improved agricultural grassland; hovering, hunting	KOC
K032	VP3	10/11/2020	13:05	Kestrel	1	203	15	70	118		improved agricultural grassland and scrub; hunting, flying	KOC
K 033	VP3	10/11/2020	13:11	Kestrel	1	124		87	37		improved agricultural grassland and scrub; hunting, flying	KOC
	VP2	17/11/2020	07:34	Teal	6	5	5				improved agricultural grassland; flying, flaying away from a pond	KOC
BZ186	VP2	17/11/2020	08:23	Buzzard	1	106			106		conifer plantation and immature woodland; gliding, circling, flying	KOC
	VP2	17/11/2020	08:47	Teal	7						improved agricultural grassland; swimming, feeding	KOC
	VP2	17/11/2020	08:58	Mute Swan	1	34			34		improved agricultural grassland and active quarries and mines; flying	KOC
	VP2	17/11/2020	09:25	Grey Heron	1	157		141	16		improved agricultural grassland; flying, descending	KOC
	VP2	17/11/2020	09:28	Mute Swan	1	107		67	40		improved agricultural grassland and active quarries and mines; flying, flying, checking few small lakes, ponds	KOC
K034	VP2	17/11/2020	10:42	Kestrel	1	151			151		immature woodland; circling, hovering, hunting	KOC
	VP2	17/11/2020	11:27	Grey Heron	1	6	6				improved agricultural grassland; flying	KOC
K035	VP2	17/11/2020	11:32	Kestrel	1	83			83		conifer plantation; circling, gliding	KOC
	VP2	17/11/2020	12:14	Grey Heron	1	56		32	24		improved agricultural grassland; flying	KOC
GP010	VP1	23/11/2020	08:31	Golden Plover	75	53	32	21			improved agricultural grassland; flying, landing, perching in grassland, feeding	KOC

Map Ref.	VP	Date	Time	Species	Number	Duration of flight (s)	Band 1 (0- 10m)	Band 2 (10- 25m)	PCH (25- 175m)	Band 4 (>175m)	Habitat and activity	Surveyor
GP011	VP1	23/11/2020	09:08	Golden Plover	75	337			337		improved agricultural grassland; flying in one area	KOC
GP012	VP1	23/11/2020	09:20	Golden Plover	57	1217	117	800	300		improved agricultural grassland; flying up&down in one small area of grassland	KOC
BZ187	VP1	23/11/2020	09:53	Buzzard	1	98	6	5	87		improved agricultural grassland; circling, landing, foraging in grass	KOC
	VP1	23/11/2020	11:02	Grey Heron	2	299	60	139	10		improved agricultural grassland; flying , h(a) flying along the river, 20s later joined by other h(b), both flying back, landing in river	KOC
K036	VP1	23/11/2020	11:10	Kestrel	1	103	13	75	15		improved agricultural grassland; flying, hunting	KOC
WS001	VP1	23/11/2020	11:21	Whooper Swan	11	380			380		conifer plantation and improved agricultural grassland; flying together, flying slow against the wind	KOC
GP013	VP1	23/11/2020	11:34	Golden Plover	2	113	10	10	93		improved agricultural grassland; flying up&down together	KOC
	VP1	23/11/2020	12:22	Grey Heron	1	64		64			improved agricultural grassland; flying along the river	KOC
BZ188	VP1	23/11/2020	12:36	Buzzard	1	39			39		improved agricultural grassland and conifer plantation; circling, mobbed by hc	KOC
BZ189	VP1	23/11/2020	12:42	Buzzard	1	97			97		improved agricultural grassland and mixed broadleaved/conifer woodland; circling high	KOC
BZ190	VP1	23/11/2020	12:50	Buzzard	3	213			213		improved agricultural grassland and mixed broadleaved/conifer woodland; circling together, then separate	KOC
GP014	VP1	23/11/2020	13:01	Golden Plover	100	224			224		improved agricultural grassland and conifer plantation; flying, separating in small groups	KOC
	VP1	11/12/2020	10:54	Mute Swan	1	182			182		improved agricultural grassland and conifer plantation; flying, commuting	KOC
	VP1	11/12/2020	10:54	Mute Swan	1	182			182		improved agricultural grassland and conifer plantation; flying, commuting	KOC
BZ191	VP1	11/12/2020	11:10	Buzzard	1						improved agricultural grassland; perching on a tree branch	KOC

Map Ref.	VP	Date	Time	Species	Number	Duration of flight (s)	Band 1 (0- 10m)	Band 2 (10- 25m)	PCH (25- 175m)	Band 4 (>175m)	Habitat and activity	Surveyor
BZ192	VP1	11/12/2020	11:38	Buzzard	2	27	19	8			improved agricultural grassland; perching, feeding flying, both perching, foraging in grass, then one flies and lands on the tree top	KOC
BZ193	VP1	11/12/2020	11:58	Buzzard	1	25	11	14			improved agricultural grassland; feeding, flying, landing, feeding on worms, then flying and landing again	KOC
BZ194	VP1	11/12/2020	12:09	Buzzard	1	42		42			improved agricultural grassland; flying, landing	KOC
BZ195	VP1	11/12/2020	12:26	Buzzard	1	24		24			improved agricultural grassland; flying	KOC
PE001	VP1	11/12/2020	16:08	Peregrine Falcon	1	25		25			improved agricultural grassland; flying, perching on a dead tree	KOC
PE002	VP1	11/12/2020	16:19	Peregrine Falcon	1	278		34	244		improved agricultural grassland and conifer plantation; flying, flying, trying to catch jd, flying away	KOC
GP015	VP2	15/12/2020	11:48	Golden Plover	200	234			234		improved agricultural grassland, mixed broadleaved/conifer woodland and conifer plantation; flying together	KOC
K037	VP2	15/12/2020	11:59	Kestrel	1	28			28		conifer plantation and improved agricultural grassland; flying, hunting	KOC
K038	VP2	15/12/2020	12:03	Kestrel	1	25	3	12	10		conifer plantation and improved agricultural grassland; flying, descending	KOC
K039	VP2	15/12/2020	12:19	Kestrel	1	73		73			improved agricultural grassland; hunting	KOC
K040	VP2	15/12/2020	13:06	Kestrel	1	61			61		improved agricultural grassland; circling	KOC
K041	VP2	15/12/2020	13:17	Kestrel	1	9			9		immature woodland; gliding	KOC
K042	VP2	15/12/2020	13:29	Kestrel	1	24		24			improved agricultural grassland and conifer plantation; gliding fast	KOC
BZ196	VP2	15/12/2020	15:36	Buzzard	1						improved agricultural grassland; perching on a pole	KOC
WS002	VP2	15/12/2020	16:57	Whooper Swan	5	29			29		improved agricultural grassland; flying, flying together to the direction of a lake	KOC
	VP3	21/12/2020	13:09	Grey Heron	1	33	16	17			improved agricultural grassland; flying, landing	KOC
	VP3	21/12/2020	13:09	Grey Heron	1	33	16	17			improved agricultural grassland; flying, landing	KOC

Map Ref.	VP	Date	Time	Species	Number	Duration of flight (s)	Band 1 (0- 10m)	Band 2 (10- 25m)	PCH (25- 175m)	Band 4 (>175m)	Habitat and activity	Surveyor
	VP3	21/12/2020	13:11	Grey Heron	1	15	15				improved agricultural grassland;	KOC
	VP3	21/12/2020	13:11	Grey Heron	1	15	15				improved agricultural grassland;	KOC
SH019	VP3	21/12/2020	15:37	Sparrowhawk	2	89		21	68		improved agricultural grassland; flying, gliding, landing	KOC
SH020	VP3	21/12/2020	15:50	Sparrowhawk	2	183	5	72	106		improved agricultural grassland; flying, gliding, chasing one another, both mobbed by hc	KOC
	VP3	21/12/2020	16:26	Teal	5	18		18			improved agricultural grassland; flying, gliding, continue chasing one another, mobbed by he again	KOC
	VP3	21/12/2020	16:26	Teal	5	18		18			improved agricultural grassland; flying, gliding, continue chasing one another, mobbed by hc again	KOC
BZ197	VP3	21/12/2020	16:44	Buzzard	1	31	21	10			improved agricultural grassland; gliding, flying, landing on a small tree	KOC
BZ198	VP1	13/01/2021	08:43	Buzzard	1	120	10	110			improved agricultural grassland and scattered tress and parkland; initially calling; lost height at end of flight	PT
BZ199	VP1	13/01/2021	09:11	Buzzard	1	29	29				improved agricultural grassland; direct low flight	РТ
GP016	VP1	13/01/2021	10:21	Golden Plover	1	50			30		improved agricultural grassland; calling; height c.70m	РТ
GP017	VP1	13/01/2021	10:30	Golden Plover	2	70			50		improved agricultural grassland; flying at c.50 metres	РТ
GP018	VP1	13/01/2021	10:44	Golden Plover	4	50			30		improved agricultural grassland; flying; height c.100m	PT
	VP1	13/01/2021	11:36	Grey Heron	1	20	20				improved agricultural grassland and depositing/lowland rivers; direct flight, probably dropped to river	РТ
BZ200	VP1	13/01/2021	11:36	Buzzard	1	255		25	230		improved agricultural grassland and woodland and scrub; initially circling, 40-50 metres, lost height over forestry	PT
GP019	VP1	13/01/2021	11:57	Golden Plover	3	35	15	5			improved agricultural grassland; flying, height 3m \rightarrow 30m	PT

Map Ref.	VP	Date	Time	Species	Number	Duration of flight (s)	Band 1 (0- 10m)	Band 2 (10- 25m)	PCH (25- 175m)	Band 4 (>175m)	Habitat and activity	Surveyor
SN002	VP1	13/01/2021	11:58	Snipe	3	120			115		improved agricultural grassland and conifer plantation; flying, height $40m \rightarrow 150m$	PT
SH021	VP1	13/01/2021	12:21	Sparrowhawk	1	55		5	35		improved agricultural grassland and woodland and scrub; direct flight, carrying small prey item, height 40-60m, reducing height at end of flight	РТ
SH022	VP2	14/01/2021	08:44	Sparrowhawk	1	200					improved agricultural grassland and scrub; display flight/ sky dancing, 60-100 metres, moved e/ne, descended to c.35 metres	РТ
SH023	VP2	14/01/2021	08:57	Sparrowhawk	1	350		30	320		conifer plantation; display flight/ sky dancing, 60-100 metres, descended to c.15 metres	PT
	VP2	14/01/2021	08:59	Lesser Black- backed Gull	9	140			140		improved agricultural grassland and conifer plantation; direct flight, 30-60 metres	PT
SH024	VP2	14/01/2021	09:06	Sparrowhawk	1	50	50				conifer plantation; flying at 5-10 metres	PT
SH025	VP2	14/01/2021	09:55	Sparrowhawk	1	375			375		woodland and scrub and improved agricultural grassland; display flight/ sky dancing, height 40- 80m descending to 25m	PT
SH026	VP2	14/01/2021	11:01	Sparrowhawk	1	27	27				improved agricultural grassland, scrub and hedgerows; flying close to ground, hunting, landed in tree	PT
SH027	VP2	14/01/2021	12:16	Sparrowhawk	1	50	25	25			improved agricultural grassland, active quarries and mines and treelines; flying, height 20m descending to 7m	PT
	VP2	14/01/2021	12:30	Mallard	4	5					lakes and ponds; flying, dropped towards lake	PT
	VP2	14/01/2021	12:30	Mallard	4	25					lakes and ponds; circling, dropped towards lake, additional to flight no.8 birds	РТ
BZ201	VP2	14/01/2021	12:34	Buzzard	1	495	30	80	90		improved agricultural grassland and woodland and scrub; flying at 10-25m then circled up, drifting se with wind, to height of 150m before drifting down lower at end of flight.	PT
BZ202	VP2	14/01/2021	12:45	Buzzard	1	25					improved agricultural grassland and woodland and scrub; flying at 20-25 metres	РТ
PE003	VP2	14/01/2021	12:58	Peregrine Falcon	1	50		25	25		conifer plantation; circling, 20-30 metres up	PT

Map Ref.	VP	Date	Time	Species	Number	Duration of flight (s)	Band 1 (0- 10m)	Band 2 (10- 25m)	PCH (25- 175m)	Band 4 (>175m)	Habitat and activity	Surveyor
PE004	VP2	14/01/2021	13:02	Peregrine Falcon	1	55	10	15	30		conifer plantation, improved agricultural grassland and hedgerows; fast dashing hunting flight, height 30m descending to 3m., male	PT
BZ203	VP2	14/01/2021	13:15	Buzzard	1	160		20	140		woodland and scrub; drifting around, height 25-30m, then dropped.	PT
SH028	VP3	21/01/2021	09:58	Sparrowhawk	1	140	4	110	0	0	wet grassland; soaring and flying over pastoral grassland and scrub, harried and harrassed by jd until off site	NM
BZ204	VP3	21/01/2021	11:45	Buzzard	1	75	0	60	10	5	improved agricultural grassland; soaring and calling over agri grassland and treelines	NM
	VP3	21/01/2021	12:42	Lesser Black- backed Gull	6	90	0	70	20	0	improved agricultural grassland; flying w across n of site	NM
WS003	VP3	21/01/2021	13:03	Whooper Swan	4	45	0	20	25	0	marsh; flying in group over lake area, visible flying n but disappeared from view	NM
SH029	VP3	21/01/2021	14:02	Sparrowhawk	1	40	20	20	0	0	improved agricultural grassland; flying low along road and roadside verges before perching in trees to the sw of vp	NM
BZ205	VP3	21/01/2021	14:05	Buzzard	1	70	0	0	0	70	improved agricultural grassland; soaring high above fields and scrub	NM
BZ206	VP2	16/02/2021	13:03	Buzzard	1	20	15	5			grassland and marsh and treelines; flying, height 4-12m	PT
BZ207	VP2	16/02/2021	13:30	Buzzard	1	9	9				grassland and marsh and treelines; eating on ground then flew to tree, height up to 4m	РТ
BZ208	VP2	16/02/2021	13:48	Buzzard	1	250		15	235		grassland and marsh and conifer plantation; circled up to 120m, hunting, dropped low	РТ
BZ209	VP2	16/02/2021	14:19	Buzzard	1	40	40				grassland and marsh and treelines; landed in tree, initially two together (5 seconds)	PT
BZ210	VP2	16/02/2021	14:30	Buzzard	1	55	55				grassland and marsh and woodland and scrub; circling, calling, flew to large ash tree	PT
BZ211	VP2	16/02/2021	14:45	Buzzard	1	33	25	8			active quarries and mines, grassland and marsh and woodland and scrub; flying, height 20m dropping to 8m	PT

Map Ref.	VP	Date	Time	Species	Number	Duration of flight (s)	Band 1 (0- 10m)	Band 2 (10- 25m)	PCH (25- 175m)	Band 4 (>175m)	Habitat and activity	Surveyor
PE005	VP2	16/02/2021	14:59	Peregrine Falcon	1	135		30	105		active quarries and mines, grassland and marsh and woodland and scrub; flying, height 10-50m	PT
BZ212	VP2	16/02/2021	16:04	Buzzard	1	8	8				grassland and marsh and treelines; flying, flight line as map ref 2	PT
BZ213	VP2	16/02/2021	16:26	Buzzard	1	15	15				grassland and marsh and treelines; on ground with frog prey before flying to trees	PT
BZ214	VP2	16/02/2021	16:26	Buzzard	1	3	3				grassland and marsh; saw off previous bird (9), stole its frog, ate it on ground	PT
L003	VP2	16/02/2021	16:55	Lapwing	40	45			20		grassland and marsh; flying, lost height at end of flight, number of birds approximate; height 25- 30m	PT
	VP2	16/02/2021	17:47	Grey Heron	2	70			70		grassland and marsh; flying, height 40-60m	PT
WS004	VP2	16/02/2021	17:58	Whooper Swan	2	50			50		grassland and marsh; direct commuting flight, height 25-30m	PT
BZ215	VP1	17/02/2021	12:14	Buzzard	1	55		55			conifer plantation and grassland and marsh; flying	PT
BZ216	VP1	17/02/2021	12:28	Buzzard	1	120		20	100		grassland and marsh and woodland and scrub; circling then glided down to wood, height up to 90m	PT
BZ217	VP1	17/02/2021	12:42	Buzzard	1	195	30	70	95		grassland and marsh and conifer plantation; direct flight then hovering, height 3m rising to 35m	PT
BZ218	VP1	17/02/2021	12:42	Buzzard	1	250	20	45	185		grassland and marsh and conifer plantation; seeing off previous bird (3) from territory; returned to perch on branch of large tree next to another buzzard, height up to 80m	PT
BZ219	VP1	17/02/2021	12:48	Buzzard	1	32	32				grassland and marsh and woodland and scrub; direct flight from large tree	PT
SH030	VP1	17/02/2021	13:15	Sparrowhawk	2	50		15			grassland and marsh and woodland and scrub; flying	PT
BZ220	VP1	17/02/2021	13:26	Buzzard	1	40			40		grassland and marsh and conifer plantation; circling, height 40-75m	PT

Map Ref.	VP	Date	Time	Species	Number	Duration of flight (s)	Band 1 (0- 10m)	Band 2 (10- 25m)	PCH (25- 175m)	Band 4 (>175m)	Habitat and activity	Surveyor
BZ221	VP1	17/02/2021	13:26	Buzzard	3	110		20	90		grassland and marsh and conifer plantation; circling, height 10-90m; same birds as flights 7 & 9	PT
BZ222	VP1	17/02/2021	13:28	Buzzard	2	60		25	35		grassland and marsh and conifer plantation; circling, height 10-50m	PT
SH031	VP1	17/02/2021	14:02	Sparrowhawk	1	300			120		grassland and marsh and conifer plantation; circling; brief sky dancing display; c.5km distance when last seen, height 40m rising to 150m	PT
BZ223	VP1	17/02/2021	14:08	Buzzard	1	355	5	15	335		grassland and marsh and woodland and scrub; circling/ drifting, height 50m rising to 150m before drifting down low	PT
BZ224	VP1	17/02/2021	14:15	Buzzard	1	20		20			conifer plantation and mixed broadleaved woodland; flying	PT
BZ225	VP1	17/02/2021	14:22	Buzzard	1	10	10				grassland and marsh and linear woodland/scrub; 2 brief flights, landed in trees	PT
BZ226	VP1	17/02/2021	14:36	Buzzard	1	110		110			grassland and marsh and linear woodland/scrub; initially circling	PT
	VP1	17/02/2021	14:42	Grey Heron	4	15					highly modified/non-native woodland and grassland and marsh; landed in conifers, presumed heronry	PT
	VP1	17/02/2021	14:44	Grey Heron	1	23					highly modified/non-native woodland; rose up, dropped back to conifers	PT
BZ227	VP1	17/02/2021	15:26	Buzzard	2	135		15	120		conifer plantation; circling, dropped down low, height up to 50m	PT
BZ228	VP1	17/02/2021	16:21	Buzzard	1	135		40	20		grassland and marsh; flying, height 20-40m	PT
	VP1	17/02/2021	17:07	Grey Heron	1	125		85			grassland and marsh and highly modified/non- native woodland; dropped to heronry	PT
	VP1	17/02/2021	17:51	Grey Heron	1	65					grassland and marsh and conifer plantation; direct flight from direction of heronry	PT
BZ229	VP3	25/02/2021	12:46	Buzzard	1	420			240	150	grassland and marsh and treelines; circling initially, height 70m rising to c.200m	PT
BZ230	VP3	25/02/2021	12:46	Buzzard	1	215			215		grassland and marsh and treelines; circling , height 40-65m, dropping to 25m	PT

Map Ref.	VP	Date	Time	Species	Number	Duration of flight (s)	Band 1 (0- 10m)	Band 2 (10- 25m)	PCH (25- 175m)	Band 4 (>175m)	Habitat and activity	Surveyor
	VP3	25/02/2021	13:07	Black-headed Gull	3	140			130		grassland and marsh; direct flight, height 50m rising to 125m	РТ
BZ231	VP3	25/02/2021	13:58	Buzzard	1	40		30	10		linear woodland/scrub; initially circling, then drifted down, height 20-30m	PT
SH032	VP3	25/02/2021	14:30	Sparrowhawk	1	55		30	25		woodland and scrub and grassland and marsh; sky dancing, height 15-30m	PT
BZ232	VP3	25/02/2021	14:35	Buzzard	1	17		17			grassland and marsh and treelines; calling, height 10-20m	PT
	VP3	25/02/2021	15:52	Herring Gull	1	20		20			grassland and marsh; direct flight	PT
	VP3	25/02/2021	17:20	Mallard	2	10		10			active quarries and mines; dropped down	PT
	VP3	25/02/2021	17:29	Grey Heron	1	105		105			grassland and marsh; heading for heronry?, height 15m	РТ
	VP3	25/02/2021	18:30	Grey Heron	2	65			65		grassland and marsh; direct flight	PT
BZ233	VP2	19/03/2021	06:30	Buzzard	1	8	4	4			grassland and marsh and woodland and scrub; flew down from conifer	РТ
BZ234	VP2	19/03/2021	06:56	Buzzard	1	3	2	1			woodland and scrub; dropped down from spruce, where perched since 0649	РТ
	VP2	19/03/2021	07:15	Mallard	3	30			30		grassland and marsh; flying, height 30-40m	PT
	VP2	19/03/2021	07:16	Mallard	2	30	5	10	15		grassland and marsh; flying, pair, height 35m initially, separated towards end of flight, male dropped down	PT
	VP2	19/03/2021	07:16	Mallard	1	10			10		grassland and marsh; flying, male, height 30m	PT
WS005	VP2	19/03/2021	07:29	Whooper Swan	4	85			85		grassland and marsh; migrating?, height 70m	РТ
	VP2	19/03/2021	07:45	Cormorant	1	150			80		grassland and marsh; direct flight, immature; height 125m dropping to 100m	РТ
	VP2	19/03/2021	08:37	Mallard	1	80	10	10	60		grassland and marsh and conifer plantation; flying, male; height 5m rising to 40m	РТ
CU001	VP2	19/03/2021	09:16	Curlew	1	125			115		grassland and marsh; migrating?, height 50m dropping to 30m	РТ
SH033	VP2	19/03/2021	09:26	Sparrowhawk	2	100					woodland and scrub and grassland and marsh; display flight, sky dancing, height 20-30m	PT

	VP1	26/03/2021	07:47	Grey Heron	1	40					grassland and marsh; direct flight to presumed heronry, height 50m dropping to 15m	PT
	VP1	26/03/2021	07:51	Lesser Black- backed Gull	1	300			300		woodland and scrub; meandering flight, height 25-60m; adult/sub-adult	PT
SH038	VP1	26/03/2021	08:19	Sparrowhawk	1	70			70		woodland and scrub and grassland and marsh; circling, height 25-35m	PT
BZ245	VP1	26/03/2021	08:25	Buzzard	1	390		175	75		woodland and scrub and grassland and marsh; flying, height 20m rising to 50m	PT
	VP1	26/03/2021	09:11	Lesser Black- backed Gull	2	75		75			grassland and marsh; flying, adults; height 20-25m	PT
	VP1	26/03/2021	09:21	Mute Swan	3	125		110			grassland and marsh and depositing/lowland rivers; circling, dropped down, height 10-25m; 2 adults, 1 juvenile	PT
BZ246	VP1	26/03/2021	09:22	Buzzard	1	7					conifer plantation; flying, height 15m	PT
BZ247	VP1	26/03/2021	09:38	Buzzard	1	65		35			conifer plantation, grassland and marsh and linear woodland/scrub; flying	РТ
	VP1	26/03/2021	09:45	Mute Swan	3	75		60	15		grassland and marsh and conifer plantation; flying, 2 adults, 1 juvenile; height 10-30m	PT
BZ248	VP1	26/03/2021	09:49	Buzzard	1	455			455		woodland and scrub and grassland and marsh; circling, high sky dancing, rose to 175m	PT
BZ249	VP1	26/03/2021	09:50	Buzzard	1	175			175		grassland and marsh; flying, height 25-50m	PT
BZ250	VP1	26/03/2021	10:16	Buzzard	1	27	17	10			grassland and marsh and woodland and scrub; calling, height 15-20m	РТ
BZ251	VP1	26/03/2021	10:18	Buzzard	1	110		40	70		grassland and marsh and conifer plantation; flying, height 20m rising to 75m	РТ

Map Ref.	VP	Date	Time	Species	Number	Duration of flight (s)	Band 1 (0- 10m)	Band 2 (10- 25m)	PCH (25- 175m)	Band 4 (>175m)	Habitat and activity	Surveyor
BZ252	VP1	26/03/2021	10:50	Buzzard	1	420		10	410		grassland and marsh and linear woodland/scrub; flying; dropped low at end of flight, rose up to 175 metres	РТ
SH039	VP1	26/03/2021	11:04	Sparrowhawk	1	300	10	30	260		grassland and marsh and linear woodland/scrub; circling; descended very low at end of flight, height while circling 110m rising to 175m	PT
GP023	VP1	26/03/2021	11:46	Golden Plover	35	210	40	90	80		grassland and marsh; circling, quantity approximate; height 1-60m	PT
	VP1	26/03/2021	11:47	Grey Heron	1	75	10	65			grassland and marsh and depositing/lowland rivers; dropped low towards river	PT
GP024	VP1	26/03/2021	11:49	Golden Plover	17	15			15		grassland and marsh; direct flight, joined up with circling group, quantity approximate; height 75m dropping to 50m	PT
GP025	VP1	26/03/2021	11:49	Golden Plover	50	90	30	30	30		grassland and marsh; circling; landed in field (x on map), quantity approximate	PT

Table 5 Vantage Point Survey Non-Flight Observations

Map Ref.	VP	Date	Time	Species	Number	Habitat and activity	Surveyor
	VP2	18/07/2020	10:45	Little Grebe	4	lakes and ponds; seen throughout entire survey after 10:45 when passing this small lake, sitting in lake (10:45am) male and female and 2 chicks	AM
	VP2	18/07/2020		Moorhen	3		AM
	VP2	18/07/2020		Water Rail	2		AM
	VP3	21/01/2021	09:45	Grey Heron	1	marsh; wading and foraging in wet corner of field, calling	NM
	VP2	19/03/2021	07:40	Moorhen	1	lakes and ponds and swamps; calling, not seen	PT
	VP2	19/03/2021	08:49	Teal	3	lakes and ponds; swimming, on pond; 2 males, 1 female	PT
SN003	VP2	19/03/2021	08:50	Snipe	1	grassland and marsh; flushed from field	PT
K043	VP2	19/03/2021	09:13	Kestrel	1	woodland and scrub; perched on bush until 0928	PT
BZ253	VP3	22/03/2021	07:17	Buzzard	3	grassland and marsh; on ground in field	PT
GP026	VP1	26/03/2021	06:55	Golden Plover	85	grassland and marsh; roosting, included birds from flight 3; remained for an hour or so	PT

Table 6 Breeding Walkover Survey Observations

Map Ref.	Date	Time	Species	Number	Habitat and activity	Surveyor
BZ001	12/05/2020	09:50	Buzzard	1	improved agricultural grassland; flying, gliding	KOC
	12/05/2020	10:45	Moorhen	1	improved agricultural grassland; swimming, feeding in a small pond	KOC
	12/05/2020	10:55	Mallard	5	improved agricultural grassland; swimming in a small pond, flying away	KOC
	12/05/2020	10:58	Grey Heron	1	improved agricultural grassland; standing, hunting	KOC
SN001	12/05/2020	13:14	Snipe	1	improved agricultural grassland; drumming male not seen just heard	KOC
BZ002	12/05/2020	13:19	Buzzard	1	improved agricultural grassland; circling, gliding	KOC
BZ003	12/05/2020	13:21	Buzzard	1	improved agricultural grassland; circling	KOC
BZ004	12/05/2020	13:32	Buzzard	1	improved agricultural grassland; circling high	KOC
BZ005	12/05/2020	15:21	Buzzard	2	conifer plantation; circling, dive down	KOC
	15/05/2020		Mallard	2	depositing/lowland rivers; swimming	KOC
BZ006	15/05/2020	10:11	Buzzard	1	improved agricultural grassland; flying	KOC
BZ007	15/05/2020	11:58	Buzzard	1	conifer plantation; flying over forestry	KOC
K001	15/05/2020	13:56	Kestrel	1	improved agricultural grassland and conifer plantation; flying, hunting	KOC
BZ008	15/05/2020	15:32	Buzzard	1	conifer plantation; flying low between trees in forestry	KOC
BZ009	15/05/2020	15:34	Buzzard	1	conifer plantation; circling above forestry, calling, watching me	KOC
	15/05/2020		Mallard	4	depositing/lowland rivers; swimming	KOC
	04/06/2020		Yellowhammer	2+	improved agricultural grassland and hedgerows; calling	KOC
BZ010	04/06/2020	12:27	Buzzard	1	improved agricultural grassland; circling	KOC
BZ011	04/06/2020	12:33	Buzzard	1	improved agricultural grassland; circling	KOC
K002	04/06/2020	12:41	Kestrel	1	arable crops; flying, hunting	KOC
	04/06/2020	12:44	Lesser Black-backed Gull	1	improved agricultural grassland; circling, gliding	KOC
BZ012	04/06/2020	14:15	Buzzard	1	scattered tress and parkland; circling, gliding	KOC
BZ013	04/06/2020	14:18	Buzzard	1	conifer plantation and improved agricultural grassland; circling, flying, gliding	KOC
BZ014	04/06/2020	15:22	Buzzard	1	scattered tress and parkland; circling	KOC
BZ015	04/06/2020	15:28	Buzzard	1	improved agricultural grassland and conifer plantation; flying, gliding, then circling	KOC

Map Ref.	Date	Time	Species	Number	Habitat and activity	Surveyor
	16/06/2020		Yellowhammer	2+	improved agricultural grassland and hedgerows; calling in a couple of locations	KOC
BZ016	16/06/2020		Buzzard	1	improved agricultural grassland; perching in a bush	KOC
	16/06/2020		Lesser Black-backed Gull	2	improved agricultural grassland; flying together	KOC
BZ017	16/06/2020		Buzzard	1	improved agricultural grassland and conifer plantation; flying over ga1 then in to the forestry	KOC
	16/06/2020		Meadow Pipit	1	improved agricultural grassland; landing in grass	KOC
	16/06/2020		Little Grebe	2	eutrophic lakes; one on the nest in the lake another swimming, diving	KOC
	16/06/2020		Mallard	6	eutrophic lakes; swimming	KOC
	16/06/2020		Moorhen	1	eutrophic lakes; swimming	KOC
	16/06/2020		Moorhen	1	eutrophic lakes; calling	KOC
SH001	16/06/2020		Sparrowhawk	1	improved agricultural grassland; gliding	KOC
BZ018	25/06/2020		Buzzard	1	improved agricultural grassland and mixed broadleaved woodland; circling	KOC
BZ019	25/06/2020		Buzzard	1	improved agricultural grassland and scrub; circling, gliding	KOC
BZ020	25/06/2020		Buzzard	1	improved agricultural grassland and eutrophic lakes; circling, gliding close to lake	KOC
	25/06/2020		Meadow Pipit	1	improved agricultural grassland; flying	KOC
	25/06/2020		Meadow Pipit	2+	improved agricultural grassland; calling flying landing in grass	KOC
K003	25/06/2020		Kestrel	1	improved agricultural grassland; flying, gliding, male	KOC
K004	25/06/2020		Kestrel	1	improved agricultural grassland; gliding with prey in talons	KOC
BZ021	25/06/2020		Buzzard	1	improved agricultural grassland; gliding	KOC
BZ022	25/06/2020		Buzzard	1	improved agricultural grassland and scrub; flying, calling	KOC
	25/06/2020		Little Grebe	2	eutrophic lakes; swimming in a small pond, lake another bird on a nest., ad	KOC
	25/06/2020		Moorhen	1	eutrophic lakes; swimming, ad	KOC
BZ023	25/06/2020		Buzzard	1	improved agricultural grassland; flying	KOC
	06/07/2020	10:31	Yellowhammer	1	hedgerows; calling in hedge	KOC
	06/07/2020	10:38	Yellowhammer	1	hedgerows; flying, land, male	KOC
	06/07/2020	10:51	Yellowhammer	1	hedgerows; calling in hedge	KOC

Map Ref.	Date	Time	Species	Number	Habitat and activity	Surveyor
	06/07/2020	10:58	Lesser Black-backed Gull	1	improved agricultural grassland; flying, juv.	KOC
BZ024	06/07/2020	11:08	Buzzard	1	improved agricultural grassland; gliding fast	KOC
	06/07/2020	11:18:00	Meadow Pipit	1	improved agricultural grassland; perching on wires, landing in grass	KOC
	06/07/2020	11:29	Lesser Black-backed Gull	5	improved agricultural grassland; flying through site	KOC
SH002	06/07/2020	11:51	Sparrowhawk	1	hedgerows; gliding fast, juv.	KOC
BZ025	06/07/2020	12:39	Buzzard	2	improved agricultural grassland; circling gliding together, then separate	KOC
BZ026	06/07/2020	12:43	Buzzard	2	improved agricultural grassland; gliding one about another	KOC
BZ027	06/07/2020	12:57	Buzzard	1	improved agricultural grassland; gliding	KOC
BZ028	06/07/2020	13:13	Buzzard	1	improved agricultural grassland; flying	KOC
	06/07/2020	13:20	Meadow Pipit	1	improved agricultural grassland; calling	KOC
BZ029	06/07/2020	13:21	Buzzard	1	improved agricultural grassland and mixed broadleaved woodland; calling, gliding	KOC
BZ030	06/07/2020	13:51	Buzzard	3	conifer plantation and improved agricultural grassland; circling, calling together then separate	KOC
BZ031	06/07/2020	14:53	Buzzard	1	conifer plantation and mixed broadleaved woodland; flying, gliding, calling	KOC
BZ032	06/07/2020	15:18	Buzzard	1	conifer plantation; gliding	KOC
BZ033	06/07/2020	15:21	Buzzard	1	conifer plantation and lowland blanket bog; circling together	KOC
	06/07/2020	15:51	Meadow Pipit	3	immature woodland; flying, calling over very young plantation	KOC
	06/07/2020	16:05	Moorhen	1	eutrophic lakes; feeding in reeds	KOC
	06/07/2020	16:05	Little Grebe	2	eutrophic lakes; dive down under water, alarm call in reeds	KOC
K005	06/07/2020	16:11	Kestrel	1	improved agricultural grassland; hunting	KOC
L001	06/07/2020	16:31:00	Lapwing	2	improved agricultural grassland; feeding in mud of small pond, one adult and one fledged juvenile	KOC
	06/07/2020	16:31	Moorhen	1	improved agricultural grassland; feeding in rushes of small pong	KOC
BZ034	08/07/2020	10:02	Buzzard	1	improved agricultural grassland; flying, gliding, hunting	KOC
	08/07/2020	10:58	Mallard	1	improved agricultural grassland; swimming in a small wetland	KOC
BZ035	08/07/2020	11:32	Buzzard	2	conifer plantation; flying over me just above forestry, both calling	KOC

Map Ref.	Date	Time	Species	Number	Habitat and activity	Surveyor
K006	08/07/2020	13:40	Kestrel	1	improved agricultural grassland; flying over road and grassland	KOC
	08/07/2020	13:46	Meadow Pipit	2	improved agricultural grassland; singing in flight	KOC
	08/07/2020	14:33	Grey Heron	1	improved agricultural grassland; flying	KOC
	08/07/2020	15:45	Moorhen	1	eutrophic lakes; feeding in a small lake, juvenile	KOC
	08/07/2020	15:45	Little Grebe	2	eutrophic lakes; one on the nest another swimming nearby	KOC
	08/07/2020	15:51	Little Grebe	2	eutrophic lakes; one on the nest another swimming nearby, but both dive down under water after seeing me	KOC
	08/07/2020	16:01	Meadow Pipit	2	improved agricultural grassland; flying, perching	KOC
	08/07/2020	16:10	Moorhen	1	other artificial lakes and ponds; feeding in a small pond	KOC

Table 7 Breeding Raptor Survey Observations

Map Ref.	RVP	Date	Time	Species	Number	Habitat and activity	Surveyor
BZ001	RVP1	18/05/2020	08:41	Buzzard	1	improved agricultural grassland, flying with prey, perching on a pole, flying away out of sight	KOC
BZ002	RVP1	18/05/2020	09:38	Buzzard	1	improved agricultural grassland, flying, land on a tree for 8min then fly away	KOC
BZ003	RVP1	18/05/2020	09:50	Buzzard	1	scattered tress and parkland and mixed broadleaved woodland, perching on a treetop for 40min, then disappear	KOC
BZ004	RVP1	18/05/2020	10:32	Buzzard	1	improved agricultural grassland, gliding, hunting, flying low	KOC
BZ005	RVP2	18/05/2020	13:02	Buzzard	1	improved agricultural grassland and mixed broadleaved/conifer woodland, flying low with prey, then go above forestry (ash plantation) and descend in the middle of it	KOC
SH001	RVP2	18/05/2020	14:07	Sparrowhawk	1	improved agricultural grassland, flying low, land in a tree line	KOC
BZ006	RVP3	26/05/2020	12:37	Buzzard	1	conifer plantation, circling, then gliding away	KOC
BZ007	RVP3	26/05/2020	12:54	Buzzard	1	conifer plantation, circling, gliding	KOC
BZ008	RVP3	26/05/2020	12:58	Buzzard	1	conifer plantation, gliding above forestry, seen during walkover	KOC
BZ009	RVP3	26/05/2020	13:14	Buzzard	2	nifer plantation and improved agricultural grassland, circling together, rising. seen during walkover	
BZ010	RVP4	26/05/2020	14:06	Buzzard	1	onifer plantation and improved agricultural grassland, circling, gliding, hunting	
BZ011	RVP4	26/05/2020	14:21	Buzzard	1	conifer plantation and improved agricultural grassland, circling, rising, mobbed by HC	KOC
SH002	RVP4	26/05/2020	14:36	Sparrowhawk	1	conifer plantation and improved agricultural grassland, circling, rising, later dive down	KOC
BZ012	RVP4	26/05/2020	15:02	Buzzard	1	conifer plantation and improved agricultural grassland, gliding, circling	KOC
BZ013	RVP4	26/05/2020	15:09	Buzzard	2	scattered tress and parkland and amenity grassland (improved), one BZa rises from forestry, circling, joins other BZb, circle together	KOC
BZ014	RVP4	26/05/2020	15:22	Buzzard	1	improved agricultural grassland, circling gliding away	KOC
BZ015	RVP4	26/05/2020	15:30	Buzzard	1	improved agricultural grassland and conifer plantation, circling	KOC
BZ016	RVP4	26/05/2020	15:53	Buzzard	1	conifer plantation, circling	KOC
BZ017	RVP4	26/05/2020	16:04	Buzzard	1	conifer plantation, circling, diving down	KOC
BZ018	RVP5	27/05/2020	10:13	Buzzard	1	mixed broadleaved woodland and improved agricultural grassland, circling over forestry gliding away	KOC
BZ019	RVP5	27/05/2020	10:36	Buzzard	1	conifer plantation, circling, displaying, skydiving	KOC
SH003	RVP5	27/05/2020	10:40	Sparrowhawk	1	improved agricultural grassland and conifer plantation, circling, mobbing BZ then rises higher	KOC
BZ020	RVP5	27/05/2020	10:43	Buzzard	2	conifer plantation, circling close to BZ no 3	KOC
BZ021	RVP5	27/05/2020	10:43	Buzzard	1	conifer plantation and improved agricultural grassland, joins other 3 BZ then glides away	KOC

Map Ref.	RVP	Date	Time	Species	Number	Habitat and activity	Surveyor	
BZ022	RVP5	27/05/2020	10:58	Buzzard	1	improved agricultural grassland, gliding descending	KOC	
BZ023	RVP5	27/05/2020	11:26	Buzzard	1	improved agricultural grassland, circling, gliding away	KOC	
BZ024	RVP5	27/05/2020	11:40	Buzzard	1	conifer plantation, gliding, descending	KOC	
BZ025	RVP5	27/05/2020	11:48	Buzzard	1	conifer plantation, circling low above young plantation	KOC	
BZ026	RVP5	27/05/2020	11:53	Buzzard	1	nifer plantation and improved agricultural grassland, gliding descending hunting		
BZ027	RVP5	27/05/2020	12:04	Buzzard	1	mixed broadleaved woodland and improved agricultural grassland, circling, gliding away	KOC	
SH004	RVP5	27/05/2020	12:05	Sparrowhawk	1	mixed broadleaved woodland and improved agricultural grassland, circling close to BZ, glide away	KOC	
BZ028	RVP6	27/05/2020	14:36	Buzzard	1	arable crops and conifer plantation, circling, rising, then gliding towards forestry descending	KOC	
SH005	RVP6	27/05/2020	14:56	Sparrowhawk	1	improved agricultural grassland, circling, displaying, skydiving, doing deep dives	KOC	
SH006	RVP6	27/05/2020	14:59	Sparrowhawk	1	improved agricultural grassland, circling close to other SH	KOC	
BZ029	RVP6	27/05/2020	15:21	Buzzard	2	proved agricultural grassland and scattered tress and parkland, circling together		
SH007	RVP6	27/05/2020	15:48	Sparrowhawk	1	mixed broadleaved woodland, circling, diving down		
BZ030	RVP6	27/05/2020	16:15	Buzzard	1	mixed broadleaved woodland, flying at 5m, crossing the road and into forest (Ballinlough parkland)	KOC	
BZ031	RVP1	04/06/2020	16:09	Buzzard	2	mixed broadleaved/conifer woodland and improved agricultural grassland, flying out of forest together, then separate and fly opposite directions.	KOC	
BZ032	RVP1	04/06/2020	16:18	Buzzard	1	mixed broadleaved/conifer woodland and scattered tress and parkland, gliding, circling 30m - 40m.	KOC	
BZ033	RVP1	04/06/2020	16:18	Buzzard	1	mixed broadleaved/conifer woodland and improved agricultural grassland, gliding next to another BZ, then circling at 30m - 50m.	KOC	
BZ034	RVP1	04/06/2020	16:21	Buzzard	1	improved agricultural grassland and scrub, circling, rising 10m - 50m.	KOC	
BZ035	RVP1	04/06/2020	16:45	Buzzard	1	scattered tress and parkland, gliding, flying close to forest park, then away 10m - 30m.	KOC	
BZ036	RVP1	04/06/2020	16:56	Buzzard	2	improved agricultural grassland and scrub, flying, circling together, then separate 10m - 30m.	KOC	
BZ037	RVP1	04/06/2020	16:56	Buzzard	3	improved agricultural grassland, circling together on site 50-80 m.	KOC	
BZ038	RVP1	04/06/2020	17:06	Buzzard	2	scrub and improved agricultural grassland, circling together, flying then separate. 8a flies away, 8b hunting, circling.		
BZ039	RVP1	04/06/2020	17:18	Buzzard	1	scattered tress and parkland, improved agricultural grassland and mixed broadleaved/conifer woodland, circling, gliding in one area at 30-60 m.		
BZ040	RVP1	04/06/2020	17:32	Buzzard	1	cattered tress and parkland, circling, hovering at 50m - 60m.		
BZ041	RVP1	04/06/2020	17:51	Buzzard	1	scattered tress and parkland, circling at 40m - 50m., observed during walkover	KOC	

Map Ref.	RVP	Date	Time	Species	Number	Habitat and activity	Surveyor
BZ042	RVP1	04/06/2020	17:56	Buzzard	1	scattered tress and parkland, perching on a tree branch, then circling above road and trees., observed during walkover	KOC
BZ043	RVP2	18/06/2020	11:03	Buzzard	1	mixed broadleaved/conifer woodland and improved agricultural grassland, circling near another BZ, glides away descending.	KOC
BZ044	RVP2	18/06/2020	11:03	Buzzard	1	mixed broadleaved woodland and arable crops, circling, rising, mobbed by JD	KOC
BZ045	RVP2	18/06/2020	11:16	Buzzard	1		
BZ046	RVP2	18/06/2020	12:17	Buzzard	1	conifer plantation and improved agricultural grassland, circling, rising, then gliding, descending.	KOC
BZ047	RVP2	18/06/2020	12:51	Buzzard	1	arable crops, circling then descending. seen during walkover., observed during walkover	KOC
BZ048	RVP3	18/06/2020	13:43	Buzzard	1	conifer plantation and improved agricultural grassland, circling, rising.	KOC
K001	RVP3	18/06/2020	15:32	Kestrel	1	improved agricultural grassland and arable crops, flying, perching on the tree top, then flying gliding over cereal field, hunting for a while, flying away. no target species observed during walkover.	KOC
BZ049	RVP4	25/06/2020	10:54	Buzzard	1	conifer plantation, gliding	KOC
BZ050	RVP4	25/06/2020	11:02	Buzzard	1	nproved agricultural grassland, flying low, landing in a tree.	
BZ051	RVP4	25/06/2020	11:26	Buzzard	1	improved agricultural grassland and conifer plantation, circling above grassland, then glide away into forestry.	KOC
BZ052	RVP4	25/06/2020	11:37	Buzzard	2	improved agricultural grassland, circling together	KOC
SH008	RVP4	25/06/2020	11:49	Sparrowhawk	1	conifer plantation, circling high above forestry.	KOC
BZ053	RVP4	25/06/2020	12:01	Buzzard	1	conifer plantation and mixed broadleaved woodland, circling above forestry.	KOC
BZ054	RVP4	25/06/2020	12:13	Buzzard	1	improved agricultural grassland, circling, rising in one small area, then gliding away.	KOC
BZ055	RVP4	25/06/2020	12:28	Buzzard	2	improved agricultural grassland, conifer plantation and mixed broadleaved woodland, perching, then circling together, then separately.	KOC
BZ056	RVP4	25/06/2020	12:42	Buzzard	1	improved agricultural grassland and mixed broadleaved woodland, gliding, displaying above forestry.	KOC
BZ057	RVP4	25/06/2020	13:14	Buzzard	2	improved agricultural grassland, gliding, circling, calling. observed during walkover.	KOC
BZ058	RVP5	29/06/2020	10:44	Buzzard	1	mixed broadleaved/conifer woodland and scattered tress and parkland, gliding, circling	KOC
BZ059	RVP5	29/06/2020	11:02	Buzzard	1	mixed broadleaved/conifer woodland and scattered tress and parkland, gliding, hovering	KOC
BZ060	RVP5	29/06/2020	11:20	Buzzard	1	improved agricultural grassland and mixed broadleaved/conifer woodland, gliding, hovering, hunting	KOC
BZ061	RVP5	29/06/2020	11:28	Buzzard	1	improved agricultural grassland, gliding, hovering, hunting	KOC
BZ062	RVP5	29/06/2020	11:53	Buzzard	1	improved agricultural grassland and mixed broadleaved/conifer woodland, gliding	KOC

Map Ref.	RVP	Date	Time	Species	Number	Habitat and activity	Surveyor
K002	RVP5	29/06/2020	12:31	Kestrel	1	improved agricultural grassland, gliding, catching a prey, flying inside a farm shed, land there, later fly away, still with prey.	KOC
K003	RVP5	29/06/2020	12:44	Kestrel	1	improved agricultural grassland and mixed broadleaved/conifer woodland, flying, gliding	KOC
BZ063	RVP5	29/06/2020	12:44	Buzzard	1		KOC
K004	RVP5	29/06/2020	13:04	Kestrel	1	improved agricultural grassland, gliding, hunting	KOC
BZ064	RVP6	29/06/2020	14:32	Buzzard	1	improved agricultural grassland, gliding over grassland.	KOC
K005	RVP6	29/06/2020	14:47	Kestrel	1	conifer plantation and improved agricultural grassland, gliding, hunting	KOC
K006	RVP6	29/06/2020	15:56	Kestrel	1	conifer plantation and improved agricultural grassland, gliding, flying male.	KOC
SH009	RVP1	03/07/2020	11:46	Sparrowhawk	1	conifer plantation, circling above forestry	KOC
BZ065	RVP1	03/07/2020	12:29	Buzzard	1	conifer plantation and improved agricultural grassland, gliding, flying gliding together just above young forestry, then separate glides near forestry and descends	KOC
BZ066	RVP1	03/07/2020	12:29	Buzzard	1	conifer plantation, improved agricultural grassland and mixed broadleaved woodland, gliding, flying, hunting, flying gliding together just above young forestry, then separate glides near forestry and descends: flies away through fields, hunting.	KOC
BZ067	RVP2	03/07/2020	14:40	Buzzard	1	mixed broadleaved/conifer woodland and improved agricultural grassland, gliding over woodland, descending into it	KOC
BZ068	RVP2	03/07/2020	15:58	Buzzard	2	mixed broadleaved/conifer woodland and improved agricultural grassland, gliding together	KOC
BZ069	RVP2	03/07/2020	16:13	Buzzard	1	improved agricultural grassland and mixed broadleaved/conifer woodland, calling, flying, gliding	KOC
BZ070	RVP2	03/07/2020	16:32	Buzzard	1	improved agricultural grassland, circling, gliding	KOC
BZ071	RVP2	03/07/2020	16:44	Buzzard	1	improved agricultural grassland, circling, gliding	KOC
BZ072	RVP2	03/07/2020	17:04	Buzzard	1	improved agricultural grassland, circling, gliding	KOC
BZ073	RVP3	23/07/2020	12:24	Buzzard	1	scattered tress and parkland, perching on a tree top	KOC
BZ074	RVP3	23/07/2020	12:36	Buzzard	1	improved agricultural grassland, gliding circling	KOC
BZ075	RVP3	23/07/2020	13:21	Buzzard	1	mixed broadleaved/conifer woodland and improved agricultural grassland, gliding, flying, landing	KOC
BZ076	RVP3	23/07/2020	13:46	Buzzard	1	improved agricultural grassland, flying, gliding, perch	KOC
BZ077	RVP3	23/07/2020	13:55	Buzzard	2	improved agricultural grassland, perching, calling, juv. perching calling in ga1, could hear 2nd bird calling not far away	KOC
BZ078	RVP3	23/07/2020	14:06	Buzzard	1	treelines, perching, flying, juv. perching on a branch over road, flying away.	KOC
K007	RVP4	23/07/2020	15:11	Kestrel	1	improved agricultural grassland, flying, perching, juv. female	KOC

Map Ref.	RVP	Date	Time	Species	Number	Habitat and activity	Surveyor
K008	RVP4	23/07/2020	15:14	Kestrel	1	improved agricultural grassland, flying, hunting, diving down, juv. female	KOC
SH010	RVP4	23/07/2020	15:31	Sparrowhawk	1		KOC
BZ079	RVP4	23/07/2020	15:56	Buzzard	2	conifer plantation and improved agricultural grassland, circling together, then separate but not far from each other	KOC
BZ080	RVP4	23/07/2020	16:17	Buzzard	1	ifer plantation, gliding	
BZ081	RVP4	23/07/2020	16:21	Buzzard	1	roved agricultural grassland and conifer plantation, flying, circling over wd4, calling, juv	
K009	RVP4	23/07/2020	16:27	Kestrel	1	improved agricultural grassland, hunting, flying, juv. female	KOC
K010	RVP4	23/07/2020	16:35	Kestrel	1	improved agricultural grassland, hunting, flying, juv. female	KOC
K011	RVP4	23/07/2020	17:07	Kestrel	1	improved agricultural grassland, flying , mobbed by HC then by juv SH	KOC
SH011	RVP4	23/07/2020	17:08	Sparrowhawk	1	improved agricultural grassland, flying, gliding, mobbed k	KOC
BZ082	RVP5	27/07/2020	11:54	Buzzard	1	improved agricultural grassland, gliding, circling, descending	KOC
BZ083	RVP5	27/07/2020	12:17	Buzzard	1	improved agricultural grassland, hunting, hovering	KOC
BZ084	RVP5	27/07/2020	12:42	Buzzard	1	improved agricultural grassland, gliding, circling	KOC
K012	RVP5	27/07/2020	12:56	Kestrel	1	hedgerows, gliding	KOC
BZ085	RVP5	27/07/2020	13:22	Buzzard	1	improved agricultural grassland and mixed broadleaved/conifer woodland, gliding up&down	KOC
BZ086	RVP5	27/07/2020	13:48	Buzzard	1	improved agricultural grassland, gliding, hunting	KOC
BZ087	RVP5	27/07/2020	13:58	Buzzard	2	improved agricultural grassland, gliding, circling together, displaying touching wingtips	KOC
SH012	RVP5	27/07/2020	14:11	Sparrowhawk	2	mixed broadleaved/conifer woodland, circling, gliding together then dive down, male & female	KOC
BZ088	RVP6	27/07/2020	15:36	Buzzard	1	immature woodland, gliding	KOC
BZ089	RVP6	27/07/2020	16:05	Buzzard	1	immature woodland, gliding	KOC
SH013	RVP6	27/07/2020	16:28	Sparrowhawk	1	immature woodland, gliding	KOC
SH014	RVP6	27/07/2020	16:51	Sparrowhawk	1	immature woodland, gliding	KOC
BZ090	RVP6	27/07/2020	16:58	Buzzard	1	improved agricultural grassland, flying, flying around large tree, juvenile begging calls can be heard	KOC

Table 8 Winter Walkover Survey Observations

Map Ref.	Date	Time	Species	Number	Habitat and activity	Surveyor	
BZ001	08/10/2020	11:04	Buzzard	1	arable crops; circling	KOC	
BZ002	08/10/2020	11:23	Buzzard	2	mixed broadleaved/conifer woodland; flying together, chasing one another above forestry	KOC	
BZ003	08/10/2020	11:26	Buzzard	5	improved agricultural grassland, mixed broadleaved/conifer woodland and conifer plantation; circling gliding together then separate	KOC	
BZ004	08/10/2020	11:30	Buzzard	2	improved agricultural grassland; circling calling	KOC	
BZ005	08/10/2020	11:42	Buzzard	3	improved agricultural grassland; circling, gliding together	KOC	
BZ006	08/10/2020	12:19	Buzzard	3	improved agricultural grassland and mixed broadleaved/conifer woodland; circling together		
	08/10/2020	12:49	Lesser Black-backed Gull	2	conifer plantation and mixed broadleaved/conifer woodland; flying gliding one after another	KOC	
BZ007	08/10/2020	12:52	Buzzard	1	conifer plantation; circling	KOC	
SH001	08/10/2020	12:54	Sparrowhawk	1	conifer plantation; flying, perching, female	KOC	
	08/10/2020	12:56	Cormorant	1	conifer plantation, lowland blanket bog and mixed broadleaved/conifer woodland; flying in a circle then away	KOC	
SH002	08/10/2020	12:59	Sparrowhawk	1	improved agricultural grassland and treelines; flying gliding, female	KOC	
GP001	08/10/2020	13:50	Golden Plover	50	improved agricultural grassland and conifer plantation; flying flock towards NW	KOC	
BZ008	08/10/2020	13:56	Buzzard	1	conifer plantation and lowland blanket bog; circling, mobbed by RO	KOC	
BZ009	30/10/2020	10:03	Buzzard	1	treelines; perching on a tree, calling	KOC	
BZ010	30/10/2020	10:04	Buzzard	1	conifer plantation and treelines; flying, lands on the same tree	KOC	
WS001	30/10/2020	10:24	Whooper Swan	6	eutrophic lakes; swimming, feeding in a small lake	KOC	
	30/10/2020	10:25	Teal	35	eutrophic lakes; swimming, feeding in a small lake	KOC	
	30/10/2020	10:26	Mallard	4	eutrophic lakes; swimming	KOC	
SN001	30/10/2020	11:27	Snipe	1	improved agricultural grassland; calling, flying	KOC	
WS002	30/10/2020	11:32	Whooper Swan	6	improved agricultural grassland, active quarries and mines and eutrophic lakes; calling, flying, descending	KOC	
	30/10/2020	11:34	Moorhen	1	eutrophic lakes; swimming, feeding in a small lake	KOC	
OD001	30/10/2020	11:35	Wood Sandpiper	1	improved agricultural grassland; feeding in flooded grass, flying away, seen from far away, looked like od but not 100% sure	KOC	
	30/10/2020	12:02	Little Grebe	1	improved agricultural grassland; swimming diving	KOC	

Map Ref.	Date	Time	Species	Number	Habitat and activity	Surveyor
	30/10/2020	12:05	Moorhen	1	depositing/lowland rivers and improved agricultural grassland; swimming	KOC
K001	30/10/2020	12:38	Kestrel	1	improved agricultural grassland; circling, then hunting	KOC
	30/10/2020	12:50	Grey Heron	1	depositing/lowland rivers and improved agricultural grassland; taking off, flying away	KOC
BZ011	21/01/2021		Buzzard	1	improved agricultural grassland and mixed broadleaved/conifer woodland; hunting	DM
BZ012	21/01/2021		Buzzard	1	improved agricultural grassland and mixed broadleaved/conifer woodland; hunting	DM
BZ013	21/01/2021		Buzzard	1	improved agricultural grassland and mixed broadleaved/conifer woodland; hunting	DM
BZ014	21/01/2021		Buzzard	1	improved agricultural grassland and mixed broadleaved/conifer woodland; hunting	DM
BZ015	21/01/2021		Buzzard	1	improved agricultural grassland and mixed broadleaved/conifer woodland; hunting	DM
BZ016	21/01/2021		Buzzard	2	improved agricultural grassland and mixed broadleaved/conifer woodland; hunting	DM
BZ017	21/01/2021		Buzzard	1	improved agricultural grassland and mixed broadleaved/conifer woodland; hunting	DM
K002	21/01/2021		Kestrel	1	improved agricultural grassland and mixed broadleaved/conifer woodland; hunting	DM
K003	21/01/2021		Kestrel	1	improved agricultural grassland and mixed broadleaved/conifer woodland; hunting	DM
	21/01/2021		Teal	18	lakes and ponds; feeding, flock flushed from a small lake	DM
L001	21/01/2021		Lapwing	55	improved agricultural grassland; travelling, flock flying over	DM
	21/01/2021		Grey Heron	1	lakes and ponds; feeding	DM
	21/01/2021		Mallard	1	lakes and ponds; feeding	DM
	15/02/2021	10:48	Mute Swan	2	improved agricultural grassland; preening, resting	KOC
BZ018	15/02/2021	11:18	Buzzard	1	improved agricultural grassland; flying	KOC
SH003	15/02/2021	11:57	Sparrowhawk	1	cutover bog and conifer plantation; circling, f	KOC
GP002	15/02/2021	12:31	Golden Plover	85	improved agricultural grassland; flying, flying together at 70-100m high	KOC
	15/02/2021	12:37	Herring Gull	1	conifer plantation and improved agricultural grassland; flying	KOC
BZ019	15/02/2021	12:46	Buzzard	1	mixed broadleaved/conifer woodland and improved agricultural grassland; flying	KOC
SN002	15/02/2021	14:01	Snipe	1	improved agricultural grassland; flying, circling	KOC
	15/02/2021	14:14	Green Sandpiper	2	improved agricultural grassland and eutrophic lakes; foraging, foraging on the edge of a pond	KOC
PE001	15/02/2021	14:23	Peregrine Falcon	1	improved agricultural grassland; flying near the quarry, perching	KOC
	15/02/2021	14:31	Mallard	4	eutrophic lakes; swimming, perching	KOC

Map Ref.	Date	Time	Species	Number	Habitat and activity		
	15/02/2021	14:31	Teal	2	eutrophic lakes; swimming,	KOC	
BZ020	15/02/2021	15:01	Buzzard	1	vet willow-alder-ash woodland and improved agricultural grassland; flying		
	15/02/2021	16:03	Grey Heron	1	wet grassland; perching	KOC	
	15/02/2021	16:25	Moorhen	1	eutrophic lakes; swimming, foraging	KOC

1 INTRODUCTION

McCarthy Keville O'Sullivan (MKO) were appointed to carry out bird survey works at Crowinstown during the period from April 2021 to September 2021 inclusive. The site is located east of Delvin and west of Athboy in County Westmeath (Grid Ref: N 622 265). The dominant habitat onsite is wet grassland and improved agricultural grassland with accompanying smaller areas of conifer plantation and a quarry. The wider surroundings are predominantly improved agricultural grassland. The total area of the wind farm site is approximately 330ha.

This report describes the ornithological survey methods employed and survey data collected at Crowinstown for the period from April 2021 to September 2021 inclusive. This report also contains information compiled during desktop studies. Particular attention has been paid to species of conservation importance and identified target species.

The report is supported by Technical Appendix 1 which contains the raw data from the bird surveys undertaken from April 2021 to September 2021. This includes detail on survey times, weather conditions, surveyors, survey results and other additional information. Flightline figures from surveys are included in Appendix 2.

The report is structured as follows:

- An introduction describing the background and statement of authority regarding ornithological works.
- A description of the desktop study and consultation carried out with regards to the site.
- A comprehensive description of the ornithological surveys carried out.
- A full description of results for all ornithological surveys carried out.
- Conclusions.

The following defines terms used in this report

"Zones of Influence" (ZOI) for potential ornithological receptors refers to the zone within which potential effects are anticipated. ZOIs were assigned following best available guidance (SNH 2016 and McGuinness et.al 2015).

1.1 Statement of Authority

This report has been prepared by Donnacha Woods (B.Sc., M.Sc.) a Project Ornithologist with MKO. The field surveys were undertaken by Kate Bismilla, Declan Manley, Tom Rea, Niall McHugh, Ian Hynes and Laura Hynes, all of whom are competent experts in bird surveying.

DESK STUDY & CONSULTATION

2.1 **Desk Study Methods**

A comprehensive desk study was undertaken prior to surveys in summer 2021 to search for any relevant information on species of conservation concern that may potentially make use of the study area. The assessment included a thorough review of the available ornithological data including:

- Review of online web-mappers: National Parks and Wildlife Service (NPWS), National Biodiversity Data Centre (NBDC), Irish Wetland Bird Survey I-WeBS.
- Review of Bird Atlases: (Sharrock, 1976; Lack, 1986; Gibbons et al., 1993; Balmer et al., 2013).
- Review of Birds of Conservation Concern (BoCCI) in Ireland 2020-2026 (Gilbert et al., 2021)
- Review of specially requested records from the NPWS Rare and Protected Species Database.

2.2 Desk Study Results

2.2.1 Identification of Designated Sites within the Likely Zone of Influence

Using GIS software, sites designated for nature conservation within the potential ZOI of the proposed wind farm site were identified. The ZOI was derived utilising a precautionary approach. Sites within a 15-kilometre radius of the proposed works were identified.

In addition, and in the absence of any specific Irish guidance, the Scottish Natural Heritage (SNH) Guidance, 'Assessing Connectivity with Special Protection Areas (SPA)' (2016) was consulted. This document provides guidance in relation to the identification of connectivity between proposed development proposals and Special Protection Areas. The guidance takes into consideration the distances some species may travel beyond the boundary of their SPAs and outlines information on dispersal and foraging ranges of bird species which are frequently encountered when considering plans and projects.

Designated sites (SPAs) located within the Likely Zone of Influence are listed below in Table 2-1.

Table 2-1 Special Protection Areas within 15 kilometres of site boundary

Designated site and code	Species of qualifying interests	Distance from wind farm site (km)
River Boyne and River Blackwater SPA (004232)	Kingfisher	1.0
Lough Derravaragh SPA (004043)	Whooper Swan	14.65
	Pochard	
	Tufted Duck	
	Coot	

2.2.2 **Breeding Bird Atlas Records**

Bird Atlas 2007-11: The breeding and wintering birds of Britain and Ireland' (Balmer et al., 2013) is the most recent comprehensive work on wintering and breeding birds in Ireland.

The study area lies within hectad N66. Table 2-2 below presents a list of species of ornithological interest recorded within the hectad.

Table 2-2 Breeding bird atlas data for relevant hectad (N66)

Species Name	Breeding Status	Conservation Status
Peregrine	Possible	BD
Kestrel	Possible	RL
Snipe	Probable	RL
Buzzard	Probable	-
Sparrowhawk	Probable	-
Meadow Pipit	Probable	RL
Yellowhammer	Possible	RL

BD=Birds Directive; RL = BoCCI Red List; Seen = recorded; Breed = breeding; Non-B = non-breeding; Possible = possible breeding; Probable = probable breeding; Confirmed = confirmed breeding.

Table 2-2 above, lists seven species recorded in the relevant hectad during the most recent breeding bird atlas (2007-2011) studies that are also protected under the EU Birds Directive or mentioned on the Birds of Conservation Concern in Ireland (BoCCI) red list (2020-2026).

2.2.3 Method of Identification of Target Species

Following a comprehensive desk study by MKO, initial site visit and consultation, a list of "Target species" likely to occur at the site was compiled. The survey work carried out at the wind farm site was specifically designed to survey for these identified target species in accordance with SNH guidance (2017). The target species list was drawn from:

- Annex I of the Birds Directive
- Red listed birds of Conservation
- Special Conservation Interests (SCI) of Special Protection Areas (SPA) within the zone of likely significant effects
- Species protected under the fourth schedule of the Wildlife Acts 1976-2012.

2.3 Consultation

MKO undertook a consultation exercise during the preparation of this report. Table 2-3 below provides a list of the organisations consulted and notes where responses have been received.

Table 2-3 Scoping Response Summary

No.	Consultee	Response to Consultation
1	National Parks & Wildlife Service	Response received 31/12/2019
2	National Parks & Wildlife Service	Response received 09/04/2020

2.3.1 NPWS Rare and Protected Species Dataset

An information request was sent to the NPWS in March 2021 requesting records from the Rare and Protected Species Database. The reply from NPWS indicated no records regarding rare and protected bird species from the Hectad in which the study area was contained, confirming the previous replies from NPWS in 2019 and 2020.

FIELD SURVEYS

3.1 Methodology

This section of the report describes the various field survey methods employed. Field surveys were undertaken from April 2021 – September 2021 inclusive. The data provided in this report is robust and allows clear, precise and definitive conclusions to be made with regard to the likely significant effects on avian receptors identified within the subject site. Field survey methodologies have been devised to survey for the bird species composition and assemblages that occur within the study area.

3.1.1 Initial Site Assessment

Based on the results of the desk study and previous surveys dating back to 2019, the likely importance of the study area for bird species was determined. Based on the collated information available from the above preliminary assessment and adopting a precautionary approach, a site-specific scope for the ornithological surveys was developed.

3.1.2 Vantage Point Surveys

Vantage point (VP) surveys were undertaken in accordance with SNH guidance (SNH, 2017) from three vantage point locations from April 2021 to September 2021.

Data on bird observations and flight activity was collected from a scanning arc of 180° and a two-kilometre radius by an observer at each fixed location for six hours per month. Surveys were orientated to provide a spread over the full daylight period including at dawn and dusk to coincide with the highest points of bird activity.

Details on vantage point watch survey effort are presented in Appendix 1 to this report. This appendix includes full details of dates, times, survey locations, survey duration and weather conditions for each survey. Appendix 2, Figure 1 shows the locations of vantage points and technical data is provided in Appendix 1.

Flight activity was assigned to distinct height bands. The flight bands were chosen with reference to the dimensions of likely turbine models for the site and the resulting potential collision height. Bands are split into 0-15m, 15-25m, 25m-200m and 200m+. Taking a precautionary approach 25-200m is considered potential collision height (PCH), for the purposes of reporting the results of this report.

3.1.2.1 Viewshed Analysis

Viewshed analysis was carried out to inform coverage of the study area from fixed vantage point locations (VP1, VP2, VP3) prior to the commencement of surveys in April 2021. Viewsheds were calculated using Resoft Wind Farm ZTV (Zone of Theoretical Visibility) software in combination with Mapinfo Professional (Version 10.0) using a notional and precautionary layer suspended at 25m, which represents the lowest swept height of the turbine blades. While the relevance of being able to view as much of the site to ground level is acknowledged, the SNH guidance emphasises the importance of visibility of the 'collision risk volume' when the data is to be used to estimate the risk of collision with turbines by birds.

The viewshed analysis involved testing each VP location for its visibility coverage by creating a view shed point two metres in height (to represent the height of observer) on a map using 10 metre contours terrain data. Using the ZTV software, a viewshed of 360 degrees was produced calculating an area 10 metres from ground level up to a two-kilometre radius. The resulting viewshed image was then cropped to 180 degrees to give the viewshed from each VP location in line with SNH (2017). A 500m buffer was applied to the likely maximum viable area of the site for a wind energy development in line with SNH's

recommendation to conduct surveys to 500m from the outermost turbines of a proposed wind farm site (2017). The viewshed analysis offers maximum views of the study area with adequate coverage of the proposed turbine layout. As described above, the predicted collision risk height band that was used in the current assessment (>25m) is considered to be precautionary and in line with previously recommended height bands advocated in SNH (2005) guidance documents. Appendix 2, Figure 9. shows the calculated viewshed analysis.

3.1.3 **Breeding Walkover Surveys**

Breeding walkover surveys were undertaken to determine the presence of bird species of high conservation concern and identify areas of possible, probable, or confirmed breeding territories for bird species observed within the study area. The survey methodology followed the O'Brien & Smith method for lowland sites as outlined in Gilbert et al. (1998). The study area for these surveys was the wind farm site and a 500m survey radius of the wind farm site.

Transect routes were devised to ensure coverage of different habitat complexes between vantage point locations within the study area. Transects were selected in order to survey all areas of suitable breeding/foraging habitat to within 100m, where access allowed. Target species included waders, raptors, waterbirds, gulls and other birds of conservation concern. Along with target species, all additional species observed were recorded to inform the evaluation of supporting habitat.

Walkover surveys were carried out during daylight hours, during the core breeding season months of April, May, June and July (2021), with the wind farm site being visited on two days per month on each occasion. Following all survey visits, the field maps were analysed to determine the number and location of breeding territories. All non-breeding individuals and species encountered were also recorded.

Survey effort, including details of survey duration and weather condition, is presented in Appendix 1. Figure 2 in Appendix 2 shows the survey area.

3.1.4 **Breeding Raptor Surveys**

Breeding raptor surveys (*i.e.*, birds of prey and owls) were undertaken within the study area and its immediate surroundings. These surveys aimed to identify occupied territories and ascertain whether breeding was successful. The methodology followed Hardey *et al.* (2013). Raptor surveys were undertaken onsite and to a 2km radius from the wind farm site monthly during the core breeding season period (April to July 2021).

Survey effort details are provided in Appendix 1. Figure 3 in Appendix 2 shows the study area extending 2km from the wind farm site.

3.1.5 **Breeding Woodcock Surveys**

Breeding season surveys for this species were undertaken in accordance with Gilbert et.al (1998). The survey area extended 500m beyond the wind farm site. All surveys were undertaken in areas of suitable breeding habitat during May and June 2021. Surveys commenced one hour before sunset and continue for an hour after sunset or until it was too dark to see. The survey aimed to record the presence of roding (displaying) male woodcock and thereby establish the distribution and abundance of the species in the study area. This survey method also allowed the observer to survey for owls, i.e., barn owls and long-eared owls. The survey effort is presented in Appendix 1, including details of survey duration and weather conditions. Figure 4 in Appendix 2 shows survey area.

Wildfowl Distribution Surveys

Wildfowl distribution and abundance surveys were focused on the immediate surroundings of the wind farm site. In compliance with SNH (2017) these surveys extended to a 500m radius of the wind farm site for foraging wildfowl and one kilometre of the site for roosting wildfowl. These surveys aimed to provide contextual information on the distribution and abundance of waterfowl species within the wider surroundings of the wind farm site. The count methodology was in line with survey methodology guidelines issued by SNH (2017) and BirdWatch Ireland (2015). Counts were undertaken during daylight hours (from dawn or before dusk).

The survey effort for all wildfowl distribution surveys is presented in Appendix 1. Figure 5 in Appendix 2 shows the wetland site survey locations.

3.1.7 **Survey Justification**

A comprehensive suite of bird surveys was undertaken at the site between April 2021 and September 2021, as detailed in this report.

Results from the 2021 breeding season are derived from a continuous six months of surveying undertaken in accordance with SNH Guidance.

The surveys undertaken provide the information necessary to allow a complete, comprehensive and robust assessment of the potential impacts of the wind farm site on avian receptors. The survey duration and scope are considered entirely satisfactory.

3.2 **Results**

3.2.1 Introduction

A comprehensive list of all target bird species recorded within the study area is provided in Appendix 1, Table 1. This list also provides the conservation status of each species. Appendix 1, Table 2 provides a comprehensive list of all non-target species recorded within the study area.

The following target species were recorded during the survey period, April 2021 to September 2021 and observations are described in detail in subsequent sections below. The list is ordered in accordance with conservation significance: Annex I species, SCIs of designated sites, Red listed species and raptors:

- > Peregrine Falcon (Annex I species; Schedule IV of the Wildlife Act; 1976)
- Hen Harrier (Annex I species; Schedule IV of the Wildlife Act; 1976)
- Coot (SCI of Lough Derravarragh SPA)
- > Kestrel (BoCCI Red Listed)
- Lapwing (BoCCI Red Listed)
- Snipe (BoCCI Red Listed)
- > Woodcock (BoCCI Red Listed)
- Buzzard (Raptor, Schedule IV of the Wildlife Act; 1976)
- > Sparrowhawk (Raptor, Schedule IV of the Wildlife Act; 1976)
- Red Listed Passerines (Meadow Pipit, Yellowhammer, Swift)

The following sections describe the observations of each target species under the individual survey headings. Raw data and maps are provided in Appendix 1 and Appendix 2, respectively.

Vantage Point Survey Results

Vantage point surveys were undertaken at the site between April 2021 and September 2021 inclusive. Summary results from vantage point surveys are presented below in Table 3-1 and discussed in further detail in Section 4 of this report.

Table 3-1 Vantage Point Survey Results

Conservation Status	Species	Total number of observations	Total Number of flights at PCH	Number of observations on site/within 500m	Activity of note	Figure
Annex I - BoCCI Green List	Peregrine Falcon	1	1	1	One observation of a bird soaring over farmland and remaining around sand quarry for a period ¹ .	Appendix 2, Figure 1.1
Annex I BoCCI Amber List	Hen Harrier	1	0	1	One brief observation in September 2021 of a bird travelling.	Appendix 2, Figure 1.2
BoCCI Red Listed	Kestrel	8	0	8	There was a total of eight observations, all relating to birds hunting and travelling.	Appendix 2, Figure 1.3
BoCCI Red Listed	Lapwing	1	0	1	One observation of birds taking off from beside a pond in a field behind VP2, indicating possible breeding. This is the same area that breeding lapwing were identified in during the 2020 breeding season surveys.	Appendix 2, Figure 1.4/1.4.1
BoCCI Red Listed	Snipe	3	0	3	Observations comprised of birds travelling, with one observation of alarm calling indicating breeding.	Appendix 2, Figure 1.5/1.5.1
BoCCI Green List	Buzzard	55	29	55	The majority of flights were of birds commuting, hunting or soaring. There were nine flights related to breeding activity, eight comprising visits to the confirmed nest site and another observation of bird emerging from woodland. There was a total of one probable territory and one confirmed territory.	Appendix 2, Figure 1.6/1.6.1

¹ The quarry located within the wind farm site is used for extracting sand, and therefore does not have suitable stone cliff-faces for breeding peregrine.

Conservation Status	Species	Total number of observations	Total Number of flights at PCH	Number of observations on site/within 500m	Activity of note	Figure
BoCCI Green Lis	Sparrowhawk	3	1	3	All observations were of birds soaring and/or	Appendix 2,
					hunting.	Figure 1.7

3.2.3 **Breeding Walkover Survey Results**

Breeding walkover surveys were carried out during the 2021 breeding season: May to July. Summary results from breeding walkover surveys are presented below in Table 3-2 and discussed in more detail in Section 4 of this report.

Table 3-2 Breeding Walkover Survey Results

Conservation Status	Species	Total number of observations recorded	Number of observations on site/ within 500m	Activity of note	Breeding Status	Figure
BoCCI	Coot	1	1	One observation of an adult calling with chick begging calls	Confirmed (One	Appendix 2,
Amber List				also recorded, confirming breeding locally.	Territory)	Figure 2.1/2.1.1
BoCCI Red	Kestrel	2	2	There was one observation of a bird carrying prey, indicating	Probable (One	Appendix 2,
List				breeding nearby outside 500m survey radius. The other	Territory)	Figure 2.2/2.2.1
				observation was of a bird foraging within the wind farm site.		
BoCCI	Buzzard	32	32	The majority of observations were of birds soaring or	Probable (Two	Appendix 2,

				carrying prey, confirming breeding nearby.		
BoCCI	Sparrowhawk	5	5	Most observations were of birds hunting and travelling. Two	Confirmed (One	Appendix 2,
Green List				observations of chick begging calls were recorded, confirming	Territory)	Figure 2.4/2.4.1
				breeding.		

3.2.4 **Breeding Raptor Survey Results**

Breeding raptor surveys were carried out during the 2021 breeding season: May to July. Summary results from breeding raptor surveys are presented in Table 3-3 below and discussed in more detail in Section 4 of this report.

Table 3-3 Breeding Raptor Survey Results

Conservation Status	Species	Total number of observations recorded	Number of observations on site/within 500m	Activity of note	Breeding Status	Figure
BoCCI Red List	Kestrel	3	0	Observations were of birds hunting and travelling. No breeding behaviour was recorded.	-	Appendix 2, Figure 3.1
BoCCI Green List	Buzzard	49	5	The majority of observations were of birds soaring and travelling. Display behaviour was recorded on a number of occasions. There was one observation of a bird carrying prey, confirming breeding locally. There was an observation of a bird existing area of forestry suggesting possible breeding.	Confirmed (One Territory) Possible (One Territory)	Appendix 2, Figure 3.2/3.2.1
BoCCI Green List	Sparrowhawk	2	0	There was one observation of a bird travelling with prey, indicating breeding in the locality. The other observation was of a bird soaring. Probable (One Territory)		Appendix 2, Figure 3.3/3.3.1

3.2.5 **Breeding Woodcock Survey Results**

Breeding woodcock surveys were carried out in May and June 2021. All observations are detailed in Table 3-4 below and discussed in further detail in Section 4 of this report.

Table 3-4 Breeding Woodcock Observations

Conservation Status	Species	Observations recorded during surveys	Number of birds within 500m of site	Activity of note	Breeding Status	Figure

only)					unknown number of pairs (min. two pairs)	

3.2.6 Wildfowl Distribution Survey Results

Wildfowl distribution surveys were carried out in April and May 2021. Summary results from wildfowl distribution surveys are presented below in Table 3-5 and discussed in more detail in Section 4 of this report.

Table 3-5 Wildfowl Distribution Survey Results

Conservation Status	Species	Observations recorded during surveys	Number of birds recorded	Activity of note	Figure
BoCCI Red List	Snipe	1	4	Birds were observed roosting at the edge of Freekan Lake.	Appendix 2, Figure 5.1

3.2.7 **Incidentals**

A number of incidental observations of target species were recorded during the survey period. The most significant of these observations are detailed in Table 3-6 below and discussed in further detail in Section 4 of this report.

Table 3-6 Incidental Observations

3.2.8 Target Species Breeding Status Summary

While breeding status is assigned according to the evidence obtained during individual breeding bird survey types in Tables 3-1 to 3-7 above, Table 3-7 below provides a breeding status summary of target species observed during the 2021 breeding season surveys at Crowinstown.

Table 3-7 Target Species Breeding Status Summary

Target Species Breeding Status Summary							
Species	Overall Breeding Status	Figure					
Coot	Confirmed breeding – one territory	Appendix 2, Figure 2.1.1					
Kestrel	Probable breeding – one territory	Appendix 2, Figure 7.1					
Lapwing	Probable breeding – one territory	Appendix 2, Figure 7.2					
Snipe	Probable breeding – one territory	Appendix 2, Figure 7.3					
Woodcock	Probable breeding – two breeding areas (min. two pairs)	Appendix 2, Figure 7.4					
Buzzard	Confirmed breeding – two territories (one within the wind farm site) Probable breeding – three territories (two partially within the wind farm site) Possible breeding – one territory	Appendix 2, Figure 7.5					
Sparrowhawk	Confirmed breeding – one territory (partially within the wind farm site) Probable breeding – one territory	Appendix 2, Figure 7.6					

4. CONCLUSION

Key impacts likely to result from a proposed wind farm on local avian receptors could include habitat loss, disturbance, displacement (including barrier effect) and collision risk. Collision risk should be a key consideration at the assessment stage for many of the target species recorded at Crowinstown and in particular kestrel and buzzard due to the amount of flight activity recorded. However, until the collision risk analysis is undertaken, this impact cannot be considered in any detail. All findings should be considered in the context of a minimum of two full years of surveys, i.e. two breeding seasons and two non-breeding seasons. Two years of flight activity data is required to inform a robust collision risk analysis. The potential for impacts such as habitat loss and disturbance displacement to result are discussed below.

A confirmed coot territory was identified during the 2021 breeding season, at Newtown Lough, adjacent to the wind farm site. The wind farm site could result in the direct (physical) or indirect (disturbance/displacement) loss of habitat for this species. This potential impact should be considered in greater detail at the assessment stage.

Kestrel were observed regularly at the wind farm site. They were recorded utilizing the wind farm site for commuting and foraging. There was one probable breeding territory identified during the 2021 breeding season, approximately 500m from the wind farm site. The wind farm site could result in habitat loss and disturbance/displacement to birds associated with this breeding territory.

A lapwing territory was identified during the 2021 breeding season, partially within wind farm site. The wind farm site could result in the direct (physical) or indirect (disturbance/displacement) loss of habitat for this species. This potential impact should be considered in greater detail at the assessment stage.

There were two occupied breeding woodcock areas identified within, or partially within, the wind farm site, with a minimum of two breeding pairs present. The wind farm site could result in the direct or indirect (disturbance/displacement) loss of habitat for this species. These potential impacts should be considered in greater detail at the assessment stage. Woodcock were not recorded outside of the dedicated breeding woodcock surveys. Additionally, there was one probable breeding territory of snipe identified within the wind farm site. This species was only recorded infrequently during the survey period. There is the potential for habitat loss and disturbance/displacement, particularly around the breeding territory identified.

Buzzards were recorded frequently during all survey types. Buzzard were confirmed to have nested at two locations, one of which was within the wind farm site, during the 2021 breeding season. There were three probable breeding territories also identified, two of which were partially within the wind farm site. There was one confirmed sparrowhawk breeding territory and one probable breeding territory identified in the 2021 breeding season. The confirmed breeding territory was partially within the wind farm site. Sparrowhawk were recorded occasionally throughout the survey period, April to September 2021.

For the species listed above, the wind farm site could result in the direct or indirect (disturbance/displacement) loss of habitat for these species. These potential impacts should be considered in greater detail at the assessment stage when a minimum of two years of data (carried out to SNH (2017)) is consolidated to undertake the analysis. If significant effects are identified during the impact assessment, it is likely suitable mitigation can be devised to offset the effects. Such mitigation for breeding birds could include if relevant:

- undertaking vegetation clearance outside of the breeding season during the construction phase.
- If nest sites are identified suitable buffers could be maintained between sources of disturbance and the nest while the nest was active/ in use.

Given the frequency of observations of some species at the wind farm site, collision risk is likely to be a key consideration for some species (e.g. buzzard/kestrel), however, the magnitude of this impact will only be fully understood following collision risk analysis of the full two-year dataset.

Hen harrier and peregrine were also recorded during surveys. These species were recorded infrequently and in low numbers at the wind farm site, with no breeding evidence observed, this therefore limits the potential for these species to be significantly impacted by the wind farm site.

A full two years of bird survey data will provide more details and further context on the overall use of the site by all species discussed above and allow for a more robust identification and assessment of likely impacts than is possible based on the data collected over six months of surveys alone.

	Breeding Raptor Survey; BRVP3B	09/06/2021	15:09	Grey Heron	1	conifer plantation; travelling - in the direction of known nest	KB
	Breeding Raptor Survey; BRVP4 + transect	03/06/2021	18:04	Black-Headed Gull	2	improved agricultural grassland; pair travelling	KB
	Breeding Raptor Survey; BRVP4 + transect	03/06/2021	18:15	Grey Heron	1	improved agricultural grassland and conifer plantation; travelling	KB
	Breeding Raptor Survey; BRVP4 + transect	03/06/2021	18:31	Grey Heron	7	mixed broadleaved/conifer woodland; 2 active nests in stand of trees - 5 fledgelings and 2 adults bringing food observed	KB
	Breeding Woodcock Survey; WKT5	30/06/2021	21:00	Yellowhammer	1	hedgerows, improved agricultural grassland and arable crops; singing	KB
	Breeding Woodcock Survey; WKT5	30/06/2021	21:05	Yellowhammer	2	hedgerows, improved agricultural grassland and arable crops; foraging, 2 males	KB
	Breeding Woodcock Survey; WKT1	03/06/2021	21:41	Little Grebe	4	drainage ditches; adult with 3 chicks foraging	KB
	Breeding Woodcock Survey; WKT4	29/06/2021	21:54	Sparrowhawk	1	improved agricultural grassland and hedgerows; foraging - mobbed by m. pair	KB
	Breeding Woodcock Survey; WKT1	03/06/2021	22:24	Mallard	1	mixed broadleaved woodland and improved agricultural grassland; travelling	KB
	Breeding Raptor Survey; BRVP1	27/07/2021	09:27	Lesser Black-Backed Gull	28	improved grassland and treelines; travelling	TR
	Breeding Raptor Survey; BRVP1	27/07/2021	09:40	Lesser Black-Backed Gull	22	improved grassland and treelines; travelling, individuals pass throughout survey.	TR
	Breeding Raptor Survey; BRVP4	28/07/2021	10:04	Grey Heron	1	improved grassland and treelines; roosting, roosting in tree	TR
	Breeding Raptor Survey; BRVP3	07/07/2021	10:16	Grey Heron	4	improved grassland; roosting, flying, 1 flew from tree where 2 juv. and 1 adult were roosting	TR

Map Ref.	Location	Date	Time	Species	Number	Habitat and activity	Surveyor
	Breeding Raptor Survey; BRVP1	27/07/2021	10:34	Lesser Black-Backed Gull	32	improved grassland and mixed broadleaved/conifer woodland; travelling	TR
	Breeding Raptor Survey; BRVP1	06/07/2021	10:52	Lesser Black-Backed Gull	17	cultivated land; travelling	TR
	Breeding Raptor Survey; BRVP1	06/07/2021	10:55	Meadow Pipit	6	cultivated land; flying and parachute descent display	TR
	Breeding Raptor Survey; BRVP1	06/07/2021	11:20	Lesser Black-Backed Gull	21	cultivated land; travelling, 7 followed shortly by 14	TR
	Breeding Raptor Survey; BRVP4	07/07/2021	11:25	Lesser Black-Backed Gull	6	improved grassland and highly modified/non-native woodland; travelling	TR
	Breeding Raptor Survey; BRVP5	05/07/2021	11:49	Lesser Black-Backed Gull	7	cultivated land and woodland and scrub; travelling	TR
	Breeding Raptor Survey; BRVP2	27/07/2021	11:59	Yellowhammer	4	linear woodland/scrub; perched on wire	TR
	Breeding Raptor Survey; BRVP1	06/07/2021	13:05	Lesser Black-Backed Gull	3	cultivated land; travelling	TR
	Breeding Raptor Survey; BRVP2	27/07/2021	13:28	Yellowhammer	2	arable crops; roosting, pair perched on wire	TR
	Vantage Point Survey; VP2	22/09/2021	14:00	Little Grebe	31	improved agricultural grassland and lakes and ponds; roosting	TR
	Breeding Raptor Survey; BRVP2	06/07/2021	14:24	Yellowhammer	2	hedgerows; singing in hedgerow	TR
	Breeding Raptor Survey; BRVP3	26/07/2021	14:45	Grey Heron	1	improved grassland and treelines; travelling	TR
BZ005	Breeding Raptor Survey; BRVP1	06/07/2021	15:13	Buzzard	1	highly modified/non-native woodland and cultivated land; hunting, 1 of 2, soaring, hovering, diving.	TR
	Breeding Woodcock Survey; Crowinstown	18/05/2021	21:10	Grey Heron	1	improved agricultural grassland and treelines; in flight, river nearby	LH
	Breeding Woodcock Survey; Crowinstown	18/05/2021	21:39	Mallard	3	improved agricultural grassland and hedgerows; three drakes in flight going west	LH
	Breeding Woodcock Survey; Crowinstown	18/05/2021	21:39	Mallard	1	drainage ditches; female flushed from drain	LH
